REGULATORY GUIDES

Withdrawal

The Nuclear Regulatory Commission has withdrawn Regulatory Guide 1.51, "Inservise Inspection of ASME Code Class 2 and 3 Nuclear Power Plant Components." This guide was issued in May 1973 to provide guidance to licensees and applicants on inservice inspection of Class 2 and 3 components of nuclear power plants. This guidance has been incorporated in the 1974 edition of Section XI of the American Society of Mechanical Engineers Boiler and Pressure Vessel Code. Current licensing practice is based on reference to the Code and this guide is, therefore, no longer needed. The withdrawal of this guide does not affect licensing commitments for construction, design and access provisions, and preservice examination made on the basis of the guide.

Regulatory guides are developed to describe and make available to the public methods acceptable to the NRC staff for implementing specific parts of the Commission's regulations and, in some cases, to delineate techniques used by the staff in evaluating specific problems or postulated accidents. Some guides also provide guidance to applicants concerning certain information needed by the staff in the review of applications for permits and licenses. Guides may be withdrawn when equivalent recommendations have been incorporated in applicable and approved codes and standards or when changes in methods and techniques have made them obsolete.

(5 U.S.C. 552(a))

Dated at Rockville, Maryland, this 11th day of July 1975.

For the Nuclear Regulatory Commission.
