Dallas, Texas 75525

License #: 42-23958-01E

The byproduct material of irradiated gemstones is transferred for use under §30.14 and equivalent regulations of The State of Texas (an Agreement State).

Type: Irradiated Gemstones (Blue Topaz)

Transfer Report: The attached report lists each style / item number (specific product by style number) and total quantity of each style transferred (shipped) during the reporting period of January 01, 2012 through December 31, 2012

Diamonlite Jewelry Co. LTD. Unit 707,7/FL, Harbour Centre Tower 11, 8 Hok Cheung Street, Kowloon, H.K. owned the product, into which byproduct material has been introduced, at the time of introduction.

Type, Quantity, and Initial Concentrations of Radionuclide:

- a) Nuclides are decayed below exempt levels at time of transfer.
- b) The type and quantity of radionuclide introduced into each product or material; and the initial concentrations of the radionuclide in the product or material at time of transfer of the byproduct material by the licensee is shown in the table on following page, listing the five (5) major nuclides and expected activity in one (1) piece of jewelry. Note: The concentration levels demonstrated in the table are at "worst case" due to the table calibrations are based on a piece of jewelry with 1.2 grams of blue topaz (majority of jewelry transferred in the report is only a fraction of 1.2 grams (0.2 grams and less per item is more the normal of grams per

piece of jewelry). Also, the time lapse from PAJ, Inc. receiving the jewelry to time of transferring to customer can be from several weeks to months, and in some instances the inventory can be in our vault for more than a year, in which further decay will occur.

Nuclide	Half-life (d)	Radiation emitted	Γ (mR/hr per μCi at 30 cm)	Expected activity in one item of jewelry (μCi)
Sc-46	84	β γ	0.013	0.00048
Mn-54	312	γ	0.0057	0.0036
Zn-65	244	γ	0.0037	0.0036
Cs-134	752	β γ	0.011	0.00011
Ta-182	115	β γ	0.0086	0.00048
Total				0.00827
