

CHAPTER 6—ENGINEERED SAFETY FEATURES LIST OF TABLES

Table 6.1-1	Pressure-Retaining Material Specifications for Engineered Safety Features.....	6.1-19
Table 6.1-2	Coatings Classifications and Uses.....	6.1-27
Table 6.2.1-1	Loss of Coolant Accidents	6.2-35
Table 6.2.1-2	Main Steam Line Breaks	6.2-40
Table 6.2.1-3	LHSI Heat Exchanger Data.....	6.2-42
Table 6.2.1-4	Containment Heat Sink Inventory	6.2-43
Table 6.2.1-5	Containment Initial and Boundary Conditions.....	6.2-65
Table 6.2.1-6	Containment Response to Hot Leg Breaks.....	6.2-66
Table 6.2.1-7	Containment Response Cold Leg Pump Suction Breaks	6.2-67
Table 6.2.1-8	Containment Response Cold Leg Pump Discharge Breaks	6.2-69
Table 6.2.1-9	Peak Containment Pressure and Temperature for MSLB	6.2-70
Table 6.2.1-10	Critical Rooms Containing HELBs	6.2-73
Table 6.2.1-11	Evaluated Subcompartment HELBs	6.2-77
Table 6.2.1-12	Mass and Energy Discharge Rates for Bounding High Energy Line Breaks.....	6.2-83
Table 6.2.1-13	Safety Grade Doors Credited to Open in Subcompartment Analyses	6.2-86
Table 6.2.1-14	Mass and Energy Discharge Rates for Feedwater Lines (LABn0BR005)	6.2-87
Table 6.2.1-15	Mass and Energy Discharge Rates for Letdown and Charging Lines	6.2-89
Table 6.2.1-16	Subcompartment Volumes (For Subcompartments Where the Pressure Increase is More Than 5 psi)	6.2-92
Table 6.2.1-17	Subcompartment Vent Paths (For Subcompartments Where the Pressure Increase is More Than 5 psi).....	6.2-93
Table 6.2.1-18	Subcompartment Peak HELB Pressures.....	6.2-97
Table 6.2.1-19	Mass and Energy Results for the Limiting Hot Leg Break	6.2-98
Table 6.2.1-20	Mass and Energy Result for the Limiting Cold Leg Pump Suction Break	6.2-117

Table 6.2.1-21	Mass and Energy Results for the Limiting Cold Leg Pump Discharge Break.....	6.2-132
Table 6.2.1-22	Input Summary for Mass and Energy Release	6.2-160
Table 6.2.1-23	Containment Energy Distribution for Cold Leg Pump Suction Break Energy (BTU)	6.2-161
Table 6.2.1-24	MSLB Mass and Energy Release Data	6.2-163
Table 6.2.1-25	MSLB Reactor Trip and Isolation Signal Summary.....	6.2-173
Table 6.2.3-1	Design and Performance of Annulus Ventilation System	6.2-245
Table 6.2.3-2	Secondary Containment Response Analysis.....	6.2-246
Table 6.2.3-3	Instrumentation, Indication, and Alarm Features for AVS (Accident Filtration Trains).....	6.2-247
Table 6.2.4-1	Containment Penetration, Isolation Valve, and Actuator Data	6.2-259
Table 6.2.5-1	CGCS Design and Performance Parameters	6.2-295
Table 6.2.5-2	HMS Design and Performance Parameters.....	6.2-296
Table 6.2.5-3	Combustible Gas Control System Failure Modes and Effects Analysis..	6.2-297
Table 6.3-1	Accumulators Design and Operating Parameters.....	6.3-22
Table 6.3-2	Low Head Safety Injection Pumps Design and Operating Parameters ..	6.3-23
Table 6.3-3	Medium Head Safety Injection Pumps Design and Operating Parameters	6.3-24
Table 6.3-4	LHSI Heat Exchanger Design and Operating Parameters.....	6.3-25
Table 6.3-5	Total Debris Source Term.....	6.3-26
Table 6.3-6	Safety Injection System Failure Modes and Effects Analysis	6.3-27
Table 6.5-1	Primary Containment Operations Following a Design Basis Accident....	6.5-10
Table 6.8-1	Extra Borating System Design and Operating Parameters.....	6.8-6
