General Comment

It is important that TVA retire the permits on Sequoyah 1 & 2. The permits are already 10 years past their original (recommended) termination dates. We require that all nuclear material be interred in casks and left on site. Monies must be used to develop safer means of energy harvesting. These Ice Condenser Reactors are out of date and dangerous. By no means will MOX fuel be made at these Tennessee Plants that are so close to Chattanooga. We look forward to a decline in Leukemia rates after all the spent fuel is in casks.
