Ganesh,

I marked up your write-up (attached). If Fermi had submitted the detailed analysis for loss of preload, would you approve the relief request? I thought the SE of BWRVIP-25 would still require the inspections even if they had done the analysis – the only way you get out of inspection is to install wedges.

Let's discuss when you get in.

Jeff,

Here is my write-up for the core plate issue. Please review it and mark-up the copy with your comments. I will incorporate them in the SE which was already reviewed by Simon.

Mac—Jeff will be our branch chief until Thursday.
