Jim,

Please inform the licensee that disposition of the detected flaws is critical for our review. If Simon is not satisfied, we may have to reject the request.

Ganesh,

I am more interested in reports documenting disposition of the detected flaws. Do these 20 or so inspection reports also contain information regarding disposition of the detected flaws? Or GE has separate reports to document the disposition?

Simon

It is OK with me. At least Pani/Tom and Simon should be present.

Gentlemen,

VY has proposed that both GE and VY representatives are willing to bring the inspections reports (approx. 20 GE proprietary inspection reports) to NRC for tech staff to review the steam dryer inspection reports and answer any questions NRC tech staff may have. Please let me know if this approach is acceptable.

Thanks

Jim Kim

Importance: High

Pani, Tom, Simon and Billy

Here is my draft report on the inspection results (RF-26, 27 and 28) of the steam dryer and it contains status of new indications. I still think we need to see the GE evaluation report which can provide information on the licensee's justification for using less frequent inspections.
