General Comment

I am concerned about several potential problems with uranium mining. In other areas when the mining industry promised that the water supply would not be contaminated, radiation was found in adjacent water supplies. Water is essential to human life, wildlife, farming and ranching. We cannot afford to have our land and food supply contaminated. Increased cancer rates are often the result of radiation contamination.

Please consider these concerns and not only the desires of big mining companies when granting mining permits.

Thank you!
