Subject: Please don't restart San Onofre! Docket ID NRC-2013-0070

Dear NRC Officials,

San Onofre is a defective nuclear power plant, that will sooner or later fail. There are 8 million people who live within 50 miles of this hazardous facility. Our lives are at stake if this plant fails.

It is built on active earthquake faults, and has a puny sea wall that is expected to protect it from a tsunami. None of you on the NRC live here. You must not care about us.

Within those 50 miles there are trillions of dollars of real estate that will have to be abandoned when the accident happens. You better start selling all of your real estate holdings while your investments still have value.

Since it is shut off now, leave it that way, and decommission it forever. Also remove all the dry casks and the spent fuel pools They will also be hazardous to our lives if left in place.

Sincerely,

MC Hagerty
