General Comment

Strata, a uranium mining company, is attempting to "develop" uranium mining in an area with already over 5,000 abandoned drill and so far only 55 of these holes have been plugged.

Uranium is a radioactive substance and very dangerous, as you in the NRC are well aware of. Much water would be needed to access this mineral. In Wyoming, a land that is already short of water, we cannot, just for the sake of economic profit, draw down necessary aquifers.

Water is a finite resources, especially in Wyoming. To contaminate this water is to make it no longer a resource. Water is lifeblood. Uranium is simply a means to a quick end--energy--with a half life that even those generations into the foreseeable future will not see end. Pure water is the most important part of the future of the United States.
