Sure, I'd like to take a look at the VC Summer work.

Of course. Do you need anything more - such as natural axial crack growth examples like VC Summer or is this adequate?

Bud

Thanks, Bud. Just FYI: Al and I are giving a talk to NRR on flaw evaluation capabilities of our branch and our contractors. I would like to include some of what you just provided. It's not meant to communicate conclusions about North Anna. We're just letting them know the types of things we do. Is that alright?

Howard,

Here are North Anna results with discussion. Let us know if you want to discuss and if natural crack growth analyses are desired.

I have included some suggestions for further study as well.

Thanks,

Bud
