U. S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Subject: Docket Nos. 50-361, and 50-362  
San Onofre Nuclear Generating Station  
Units 2 and 3

Reference: F. R. Nandy, Manager of Nuclear Licensing, to Document  
Control Desk, "Main Steam Safety Valve Ring Setting  
Modification Analysis Results," February 9, 1990.

In our letter dated February 9, 1990, Southern California Edison (SCE) indicated that the bases for Technical Specification (TS) 3/4.7.1.1, "Safety Valves," were under review. The letter also indicated that a submittal would be made on June 30, 1990, to request approval of changes to these bases.

However, on June 8, 1990, the NRC approved Amendment Nos. 88 and 78 for Units 2 and 3, respectively. These Amendments revised the Allowable Value of the Linear Power Level High in Table 2.2-1 from 111.3% of Rated Thermal Power (RTP) to 111.0% RTP. This change impacts the values in Table 3.7-2 of TS 3/4.7.1.1, which in turn has impacted our effort. We will now need to revise the technical specification as well as the bases.

Accordingly, SCE will require more time to incorporate these revisions, and prepare a formal license amendment application. We estimate that the specific Limiting Condition for Operation and bases revisions will be submitted by approximately September 30, 1990.

If you have any questions, please feel free to call me.

Very truly yours,

cc: J. B. Martin, Regional Administrator, NRC Region V  
C. Caldwell, NRC Senior Resident Inspector, San Onofre Units 1, 2 and 3
