Gentlemen:

Subject: Docket Nos. 50-361
Revised Pressure-Temperature Curves
San Onofre Nuclear Generating Station
Unit 2

Reference: SCE (F. R. Nandy) to NRC letter dated February 23, 1989;
same subject

By the letter referenced above, SCE informed the NRC that the current Pressure-Temperature curves for San Onofre Unit 2, valid through four effective full power years (EFPY), would expire on April 14, 1989. After submittal of the referenced letter, SCE performed an updated P-T curve expiration projection based on actual core follow data. SCE's current best estimate for P-T curve expiration is April 11, 1989. Assuming that Unit 2 continues 100% full power operation for the remaining days until this forecast date, SCE will need NRC approval of the revised P-T curves prior to April 11, 1989 to preclude an unnecessary plant shutdown.

If you have any questions, please contact me.

Very truly yours,

cc: J. B. Martin, Regional Administrator, NRC Region V
F. R. Huey, NRC Senior Resident Inspector, San Onofre Units 1, 2 and 3
