Director, Office of Nuclear Reactor Regulation
Attention: Mr. Frank Miraglia, Branch Chief
Licensing Branch No. 3
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Gentlemen:

Subject: Docket Nos. 50-361 and 50-362
San Onofre Nuclear Generating Station
Units 2 and 3

SCE's letter of July 10, 1981 informed the NRC that the Dresser 31709 NA Safety Valves used at San Onofre Units 2 and 3 that were tested by the Electric Power Research Institute (EPRI) as part of a generic industry-wide relief and safety valve qualification testing program failed to meet the EPRI screening criteria. The letter also indicated that possible solutions were being investigated and that the NRC would be advised of future developments.

Consistent with that commitment, SCE met with the NRC staff on September 16, 1981 in Bethesda, Maryland to discuss modifications being made to the San Onofre Units 2 and 3 safety valve inlet piping in order to facilitate acceptable safety valve operation. Enclosed please find seven (7) copies of the meeting handouts depicting the piping modifications which were provided to the NRC staff during the September 16, 1981 meeting (NRC Mail Code B028).

If you have any questions or comments regarding the enclosed information, please let me know.

Very truly yours,

KP Baskin / NLM
