Hi Laurie,

Area 1222 will remain a portion of Picatinny Arsenal follow its radiological release, however we would no longer consider it radiologically controlled. I don't know if this answers your question. If not we can discuss on Monday.

Rich

Rich:

I have another question based on my review of your plan. It appears that you intend to perform any necessary remediation and then conduct a radiological survey of the area in accordance with MARSSIM guidance (NUREG 1557) through implementation of the Plan, accompanying your letter dated August 12, 2013.

My question is:

Are you requesting the release of Area 1222 for unrestricted use or do you intend to confirm (using MARSSIM) that Area 1222 would meet the requirements for release for unrestricted use and Area 1222 would remain a portion of the Picatinny Arsenal site?

Thank you,

Laurie A. Kauffman

Rich:

I simply needed clarification regarding the Army's intention because the NRC does not contribute to licensee's submittals, such as DPs, amendment requests, renewal requests, etc. No need to resubmit cover letter.

Thank you,

Hi Laurie,

I would prefer approval if possible. I felt the final approval would follow data collection and analysis, however if the NRC will approve the test plan, please do so. Will you require a change to the request letter?

Thanks
Rich

Mr. Lamoreaux:

In your letter, dated July 23, 2013, that transmits your MARSSIM Final Status Survey and Sampling Work Plan, dated April 2, 2013, you requested the NRC review and comment on the plan to release area 1222.

Is it your intention to receive comments from the NRC or are you submitting the decommissioning, survey, and sampling plan for NRC approval?
