Subject: Doel 3 and Tihange 2 RPV flaws

Attached Belgium regulatory agency's recent report regarding their findings with respect to the Doel 3 and Tihange 2 RPV flaws. I seem to remember when this was first raised, that several U.S. plants had similar components manufactured at same locations in Europe in same timeframe. I also remember NRR sending someone off to Belgium to gather information, but haven't heard anything recent. That was a while back, so I don't know how NRR is reacting to latest conclusions and decisions in Belgium with respect to potential applicability to certain plants here.
