b6

Mark,

We are in the planning stages for an analysis to address the impact that a large number of buried flaws (e.g., flakes) may have on forged-ring RPV integrity.

Will it be possible for us to obtain the BV-1 PTS transient pressure, temperature and heat transfer coefficient time histories and the transient frequencies for the dominant events used in the Staff's PTS reevaluation effort? We would need that information for input into FAVOR. I can ask Ron to provide additional details if necessary.

Regards,
Tim
