Pat,

I think I accidentally responded to the wrong email message. I believe I intended to respond to one from John Daily in DLR. At any rate I did speak to him on Friday.

Don't know who John is? Did you mean John Thorp?

John,

I tried to call but I guess it was too late. You can reach me at home tomorrow at

E/78

Mike, as you may be aware, Bob Hardies is going to Belgium next week to participate in further discussions with the working groups. Recall, we paired down the folks on this visit due to international travel budget. Also, we may hear a bit more from industry on 1/15 regarding domestic response. Agree an action plan may be appropriate and suggest we discuss where we want to head mid-January (after Bob's return and discussion with industry's materials group).

Bob Hardies, any thoughts?

Hi guys.

Do you all have (or are considering) an action plan on Doel? I think we are getting to the end of what I would call Phase 1 on Doel (all the interactions with the Belgians) under the auspices of the Research Assistance Request. I imagine you all have some plans to assess whether this event has implications for the domestic plants and we're trying to figure out whether you would need our support for that or not (would probably involve a user need).

(b)(5)

Our other interest is finishing off products on the PTS RG, Appendix G, and RG 1.99 which are all vessel related and pretty much ready to get out the door (to you all) sometime in the first half of this year.

Let us know how we can help put together the big picture!
