Many thanks for your help in such a very short time !

We will try to convince our safety authorities with the arguments you give us.

Indeed the question is coming from the French authorities, they try to impose their position in Belgium

We will come back to you with more details about the final decision taken regarding this hydro test

Best regards

Michèle

Tim, et al:

Attached is a paper I found from when the original N-498 (Class 1 and 2) was expanded to include Class 3. There is a reference in it to a Bush/Maccary white paper which I believe has some of the relevant basis information. I have looked but cannot find any file or hard copy I have of that. I have seen it a few times during ASME activities though. Perhaps Rick Swayne or Frank Schaaf would have it from when this item was going through Code in the late 80's and early 90's. Maybe the attached helps some.

Dan

Importance: High

Dan, Warren, Gary,

Do you recall if there was a technical basis document for Code Case N-498? If so, how can we retrieve it?

Thanks,

Tim

Doug, Tim, Warren, Guy, Russ, Keith;

Can any of you help with the below emergency request about info on arguments why hydrotesting can be avoided as per in N498 for RPVs? See below e-mail.

Please reply to Valery immediately.

Thanks
