John Ahearne, President
Nuclear Regulatory Commission
Washington, D.C.

Dear Mr. Ahearne,

It really is too bad that nuclear power is so utterly lethal, because if it weren't and if it were efficiently applied to the production of energy it should be capable of producing limitless and safe energy.

"If" and "should" are hopeful, ideal conditions but the "reality" of the situation is that nuclear power is cancer causing in every level of its production, from the mining to the storage of radioactive waste.

Adherents of the nuclear industry are very educated when it comes to physics and hard technology but appear to be quite uninformed as to the health effects of radioactive substance on atomic workers or the general public.

Ignorance also seems to be the reason for placing nuclear power plants on or very near earthquake faults; Diablo, Onofre.

The technology itself may not be advanced enough at this point in time to manipulate the hazardous substance without bringing disaster to all those in its wake. For instance why the need to place nuclear power plants next to water ways, rivers and beaches? Why waste such vast quantities of nuclear fuel ^{in producing energy?} Doesn't the industry know that we are going to be left with irradiated power plants after their 30 year lifespan is complete? And what about the waste?

DSO3

10

Sincerely yours
Michelle Sande
