RE: Amendment to NRC License #: 21-32196-01^a
Dearborn Cardiology Associates

Control #: 582346

Dear Sir/Madam:

We would like to amend our current NRC license to reflect the following changes.

Dearborn Cardiology Associates has been purchased by Oakwood Health Care System effective November 1, 2013. The new name of this facility is **Oakwood Cardiovascular Associates.**

Therefore we wish to amend our license to reflect these changes.

- File Transfer of Control papers to reflect the "Change of Ownership". Please note that this is a direct change of control as defined by the NRC.
- Change the name of NRC License # 21-32196-01 to reflect this "Change of Ownership".
- Please note that the signatures below denote that the seller and buyer agree to the change of ownership as noted in this document.

Thank you for your cooperation. If you have any questions or require additional information, please contact our RSO, Gregory Pitt at 313-228-0505.

Sincerely,

Eric McBride, MBA, MHSA
Oakwood Executive Management

Samir Dabbous, MD
Owner Dearborn Cardiology Associates

TRANSFER OF CONTROL
PER NUREG-1556, Volume 15

1. NRC License # 21-32196-01
2. Current name: Dearborn Cardiology Associates
3. The new name will be: Oakwood Cardiovascular Associates
4. The license contact name is: Gregory Pitt at 313-563-3640
5. Transfer of stocks by sale will be made.
6. Oakwood Health Care System will obtain possession of all radioactive materials, sealed sources and radiation safety equipment for the following locations:

22060 Beech Street
Dearborn, MI 48124

19725 Allen Rd Bldg 2
Brownstown, MI 48183
7. Dearborn Cardiology Associates will no longer operate once the transfer is complete. All activities will be performed under Oakwood Cardiovascular Associates.
8. There will be no change in personnel or duties that relate to the Radiation Safety Program. All currently approved users for the licensee will remain without change. The Radiation Safety Officer for this license will be Gregory Pitt, BS.
9. There will be no change in the organization, location, facilities, equipment or procedures that relate to the Radiation Safety Program.
10. All required records regarding the use and possession of licensed materials will be current at the time of the transfer. The status of compliance will be maintained before, during and after the merger. All of these records are maintained on site. No records regarding licensed material will be removed from the licensed site.

11. All required documents and records are currently kept in accordance with the NRC license conditions. These include, but are not limited to the annual calibration of survey instruments, semi-annual leak testing of non-exempt sealed radioactive sources, radiation monitoring and personnel exposure monitoring reports. Radiation monitoring is performed as required by the NRC licensee on a daily basis for acceptable radiation levels and weekly for removable contamination.

12. We confirm the areas of storage, preparation, handling, and administration of radioactive materials are surveyed daily for acceptable radiation levels and weekly for removable contamination. If contamination of these areas is detected during these daily or weekly surveys, decontamination is undertaken and completed at that time. The unsealed radio-nuclides in use at this location are all short-lived (i.e. half lives less than 65 days, most less than 10 days). Therefore, radioactive contamination is highly unlikely at this facility. If contamination were present, it would be discovered prior to the transfer. Record will be maintained on site of inventories of sealed sources and spills of radioactive materials.

13. Oakwood Cardiovascular Associates agrees to abide by all commitments and representations previously made to the NRC by Dearborn Cardiology Associates. Oakwood Cardiovascular Associates will maintain the same Radiation Safety Program as previously prescribe to by Dearborn Cardiology Associates.

14. Oakwood Cardiovascular Associates accepts full responsibility for the site. This facility is exempt from providing financial assurance for decommissioning because of the type of radioactive materials used (i.e. short-lived, unsealed sources in small quantities only). Routine radiation monitoring of the facility ensures that contamination will not be transferred during any subsequent change of ownership.

15. All parties (transferor and transferee) involved with the transfer are aware of and agree to the planned transfer of ownership. There are no open inspection items at this time.

Oakwood
We specialize. In you.™
