Subject: proposed rule - waste confidence

I am in total agreement that nuclear will power the future. Its' the only way to reduce dumping CO2 in the atmosphere.

I am concerned that environmental groups and the public are fixated on SOLAR as the power of the future.

This is unrealistic, it should be a priority to educated the public on baseload and peak power.

Calif. and Ontario both publish on-line their **24 hour electric power graph/curve**. It is very useful to demonstrate that renewables have an insignificant effect on baseload. I would encourage NC to do the same.
