General Comment

Something way beyond leaving spent fuel rods sitting in place at Oyster Creek and any other decommissioned nuclear plants has to be arranged quickly.

We are all watching the horrors of what an uncontrolled nuclear mess looks like and the thought of leaving 50,000 casked but nevertheless still radiated rods right in between two of the most heavily traveled roads in New Jersey is beyond the pale. That plant never should have been built where it was and because it is the oldest in the nation, it was and is maintained at the lowest of all safety standards.

To that, this area was hit by Storm Sandy last year and that plant wasn't even built to withstand a hurricane. The entire place needs to be leveled and cleaned up permanently. Manhattan would be the ultimate receiver of a disaster here because for most of the year the wind blows from the south and south west.

Please keep Fukushima in mind because it is from the same design batch as Oyster Creek. We cannot risk the Atlantic Ocean and I am begging you to stop worrying so much about the companies involved and address instead Life - all forms of it.

Sincerely

Helen Holmes
Kill Zone Dweller
