Subject: There is no way nuclear waste can be made safe to truck around on public roads...

Nuclear facilities should be shut down, and stop creating waste for which there is NO SAFE DISPOSAL POSSIBLE.

It cannot be trucked around on public roads. That is far too dangerous. We do not need deadly mobile radiation on our roads.

The radiation from Fukushima has reached Florida and California shores and has been found in fish there.

Nuclear energy

is entirely counterproductive, because the multibillion dollar disassembling of this most dangerous and filthy form of energy,

is never figured into the cost, and disposal is a huge problem and an expensive one. NUCLEAR ENERGY CANNOT BE MADE

SAFE IN THE AGE OF EXTREME WEATHER AND SUPER STORMS. The shoreline plants are in grave danger of releasing their

very extremely lethal poisons and toxins. We need clean renewable energy now to survive on our planet.

There is NO SUCH THING AS SAFE NUCLEAR ENERGY, except in very small nuclear generators that if they fail or drown will not send out huge lethal amounts of radioactive materials. The large plants are obsolete and insane ideas and the NRC is too full of people in the industry to be truly objective. The NRC is full of special interest minded regulators, and we the people all know it. It has been all over the press, as well.

Yours truly,
Dr. Lionel B. Luttinger
and Pr. Daniela Gioseffi
