Subject: NRC public meeting feedback

I have to write to you again after listening to the NPR interview of a former anti-nuclear activist who now believes the only way to counter global warming is to increase nuclear power and to "make it safer".

He overlooks that it has not been made safer in the half century it has existed and that saying it will "be safer" does not make it so.

He forgets that in over 50 years, the nuclear industry has found no solution to the problems of nuclear waste and the countless contaminating accidents and errors and catastrophes that have already occurred..

I propose that every member of the NRC, the DOE, and the EPA; every drafter of environmental impact statements related to nuclear power; every person who supports the existence and expansion of nuclear power be required to personally visit Fukushima today ----

-to speak with the victims about their tragic experiences; their losses of family members and friends and homes and communities ; and the cancers and other health issues that have already developed and will continue to develop into the future.

- to observe first hand the ongoing contamination of air, land, and sea they are experiencing with no end in sight.

- to observe the millions of tons of radioactive water that is being poured daily into the Pacific Ocean and understand that it is now contaminating all of our oceans as well as our own west coast.

Only then can there be an intelligent, responsible, sensible discussion about nuclear power.

Only then can there be responsible suggestions, proposals, and decisions about the problems and future of nuclear power here in the US.

Sincerely,

Susan Fasten
Wellesley, MA
