General Comment

The US policy concerning radioactive "waste" (terminology somewhat akin to the term "side-effects" of medications, as if they are inconsequential -- when they are actually just not the effects being marketed to consumers) has always been woefully negligent from a standpoint of public safety, is apparently being considered by the NRC to be doubled-down on.

Polite discourse has not the means to express my derision of you as individuals for being lap-dogs for a nuclear industry that is headed by military-state maniacs. It makes me wish there truly was a God, so that there would be a Hell for you and they to spend eternity in for what you have done to endanger life on this planet.

I once studied nuclear chemistry, and performed some laboratory work in the field. It seemed (and seems) to me that enormous amounts of research money went in to discovering commercial applications, and almost zero into how to deal with its consequences responsibly, Being true alchemy and having the unlimited funding behind it of the Pentagon, the only true barrier to having concurrently figured out how to completely de-toxify any and all nuclear material was will -- which to say was sorely lacking is an understatement, because it was purposefully ignored. The shame on you all for that only scratches the surface of the personal consequences you deserve.

I doubt you have the cajones to exercise the appropriate amends, but you ought to feel compelled to do everything you can, beginning NOW, by rejecting this absurd farce of a Propose Rule.
