## General Comment

When I was a child I heard on TV that the nuclear waste would be shot out to space or to a dead planet, no problem. Being a child I believed it. Now to my horror I find out just how many nuclear plants there are and that the fuel is just stored nearby and piling up over the years, just waiting for some natural disaster or human trip up to bring us all deadly radionuclides to our back doors, in our kids sandboxes and to breathe in construction areas, when lawn mowing and a plethora of other activities that might stir up dust. Not to mention getting in our food and water.

Let us not go down in history, providing someone is left alive to read it, as the civilization that destroyed themselves for greed. These are death machines and their excreta, their waste, will contaminate the earth for thousands of years.

Please build no more of these and get the greatest scientific minds to come up with a solution to make this waste safely stored away until such time as we know how to safely dispose of it. It is unconscionable to continue running the plants creating more waste, Increasing the probability of mass annihilation.
