Subject: Docket No NRC 2012-0246

Dear NRC,

Nuclear technologies are the most harmful, toxic and long-lasting practices that humans have ever engaged in. Nuclear activities should have been halted generations ago - there is nothing safe about nuclear at any stage of the nuclear fuel cycle. Now we are faced with the nuclear waste issue - one of the many monsters in the closet - that will last for millions of years, killing much of life on our Earth in it's wake.

Here are my succinct comments, as I have a broken arm:

1. The draft EIS should be rejected and revised to reflect the true and looming risks posed by nuclear waste. I have no confidence in NRC's "waste con-fidence."
2. The nuclear industry in it's entirety - from mining to processing to "power" to reprocessing to weapons should be shut down completely due to the extreme risks it poses to life itself on our planet Earth. Why are we making extremely toxic waste that we have no capacity to safely transport, store and contain for the next few million years?
3. No new reactor licenses should be issued due to the extreme risks to public and environmental health.
4. There is no where safe to put the waste. All of the acrobatics to locate a "safe" storage / disposal site are a hoax - there is no safe way to handle and manage nuclear materials, and I have no confidence that one will be "found". Furthermore, there is no safe way to transport the stuff.
5. Nuclear technologies never should have been. I demand that you stop the insanity now. No more nuclear anything - halt the entire cycle before you put an end to life on Earth.

Sincerely,

Nan Laney
