## NRC PUBLIC MEETING FEEDBACK

Category

3

Meeting Date: 11/20/2013

Meeting Title: Public Meeting to Receive Comments on the Waste Confidence Draft Generic Environmental Impact Statement and Proposed Rule - San Luis Obispo, CA

Thank you for attending this public meeting hosted by the NRC. In order to help us understand your views about this meeting and improve future meetings, please take a couple minutes to answer the following questions.

Please address the following statements in terms of your experience at the meeting. 1 is "strongly disagree" and 5 is "strongly agree."

	STRONGLY DISAGREE	DISAGREE	NEITHER AGREE OR DISAGREE	AGREE	STRONGLY AGREE
1. The meeting achieved its stated purpose.	1	2	3	4	5
2. This meeting helped me to understand the topics discussed.	1	2	3	4	5
3. The meeting location, starting time, and duration were reasonably convenient.	1	2	3	4	5
4. The meeting facility, room set up, microphones, and visuals used contributed to the success of the meeting.	1	2	3	4	5
5. Attendees were given sufficient opportunity to ask questions or express their views.	1	2	3	4	5
6. Attendees were listened to and understood by NRC staff.	1	2	3	4	5
7. The presentations and explanations given by the NRC staff were understandable, fair and balanced.	1	2	3	4	5
8. I am satisfied overall with the NRC staff who participated in the meeting.	1	2	3	4	5

Please provide any suggestions you have on ways the NRC could improve their public meetings:

The meetings should be held on the weekends to increase attendance. The facility should be large enough to accommodate all participants and their parking needs. This GEIS meeting should be held in every single community that has a nuclear reactor - not just a select few. See Reverse →

Please fold on the dotted lines with Business Reply side out, tape the bottom, and mail back to the NRC.

Please provide any additional comments:

The methodology informing the Waste Confidence Rule EIS is scientifically invalid! The artificial creation of composite, generic, and non-existent nuclear sites is inherently flawed to perform qualitative analysis. Each site has unique geological, socio-political, geographic, environmental and epidemiological features. Moreover, each nuclear reactor has a unique construction and mechanical operation - not a generic design.
