

The revised TR incorporates the documents referenced in draft license condition 9.2 as follows. Please note that the revisions to the TR RAI 2.9-12 response, which were provided in ML12305A056, were inadvertently omitted from the revised TR (i.e., correcting the reference to NUREG/CR-5512). Replacement pages for the revised TR incorporating the changes to the TR RAI 2.9-12 response are attached.

Accession No.	Doc. Date	Description
ML091200014	2/28/2009	Original TR: formed the basis for the revised TR. Vertical change bars and updated footer dates indicate where revisions occur, and change indices describe the source of each revision.
ML092870160	8/10/2009	Supplemental Report (SR): Appendix B (Pond Design Report) was incorporated as Appendix 3.1-A. The RESRAD dose figures and output from Appendix D were incorporated as Appendix 7.3-D. All other SR text and appendices were superseded by changes based on the June 2011 TR RAI responses and revisions to Section 2.7.2 as described in the change indices.
ML112071064	6/28/2011	TR RAI Responses: the change indices indicate where each RAI response is incorporated into the revised TR. As indicated in the revised TR transmittal letter, six of the RAI responses have been updated (P&R-10, P&R-14(b), 2.7-13(f), 2.7-15, 5.7.8-17 and 6.1-4).
ML120620195	2/27/2012	Numerical Groundwater Model Report: incorporated as Appendix 6.1-A in the revised TR.
ML121030013	4/11/2012	Clarification of the method of sampling and measuring ORP: Powertech understood this to be a response to a question from NRC staff and not something requiring revision of the TR.
ML12173A038	6/13/2012	Additional Regional Meteorological Data: incorporated into revised Appendices (2.5-D and 2.5-E) and into Section 2.5 as indicated on the change indices.
ML12179A534	6/27/2012	Revised Response to TR RAI 5.7.8-33(b): incorporated into revised TR as indicated in the change indices.
ML12263A250*	9/18/2012	Action items from August 30, 2012 public meeting: incorporated commitment to use well screen length and not average ore zone thickness to calculate PVs; change locations are indicated in the change indices.
ML12305A056	10/19/2012	Supplemental Sampling Plan and Responses to Comments Regarding Draft License: did not incorporate into revised TR, since the commitments for additional sampling were provided to comply with the license conditions and not to update the application.
