RE: Notification of intent to decommission and remove the Glasgow Site from the four sites consolidated DuPont - US NRC Radioactive Material License Number 07-13441-02.

To whom it may concern,

We are writing to notify you of our intent to decommission the Glasgow Site and through future amendment, remove this site from the NRC approved list of active material use sites under our current License - US NRC Radioactive Material License Number 07-13441-02.

The E.I. du Pont de Nemours and Company, Inc. (DuPont), operating under the conditions of the current DuPont - US NRC Radioactive Material License Number 07-13441-02, maintains the authorized active use of licensed materials within the four separately identified Site locations as described under condition 10.A. Those four locations are also identified here as follows;

- Stine-Haskell Research Center, 1090 Elkton Road, Newark, Delaware
- Experimental Station 700-779 Powder Mill Road, Wilmington, Delaware
- Glasgow Site, 2309 Sunset Lake Road, Newark, Delaware
- Chestnut Run Plaza, 4417 Lancaster Pike, Wilmington Delaware

It is our intent to fully decommission the Glasgow Site (2309 Sunset Lake Road, Newark, Delaware) for unrestricted use and subsequently have this site removed through amendment from the current License. All active licensed material use related to this Glasgow Site (Research and Development facility) has ceased and all remaining licensed materials have been removed from the site premises, effective January 15, 2014. We have initiated the process for final decommission of the Glasgow site and anticipate completing this work at some point during the current calendar year. Upon the successful completion and documentation of the final decommission, we intend to petition through amendment to the License (07-13441-02) for the termination of conditional use of all licensed materials at the Glasgow Site, 2309 Sunset Lake Road, Newark, Delaware and for the subsequent removal of this site from the above list of License 07-13441-02 authorized sites.
