## MEMORANDUM

TO: File

FROM: Bill Slocumb *BS*

DATE: April 29, 1996

SUBJECT: Telephone conversation on April 29, 1996 with Richard Grome reference head leakage measurements on Zurich Unit and status of Distribution License Application

On April 29, 1996, Richard Grome called and asked if I had received the revised head leakage measurements on the Zurich Unit. I told him that I had received the measurements by fax, however, the quality of these documents were not very good and I needed the originals for attachments to the device registry document. I also told him that once I received these documents that I felt the evaluation of the Gamma Knife Unit Model 23004 Type B would be completed from my standpoint. He said "this was good news because they had customer in Pennsylvania that was ready to file an application".

I then asked him about the status of their application for a distribution license for this device. He told me that "Martin Knotts had told him that the application had been provided to Tom Hill". I again reiterated to Mr. Grome the need to obtain the distribution license.
