AVAILABILITY OF REFERENCE MATERIALS IN NRC PUBLICATIONS

NRC Reference Material

As of November 1999, you may electronically access NUREG-series publications and other NRC records at NRC's Public Electronic Reading Room at <http://www.nrc.gov/reading-rm.html>. Publicly released records include, to name a few, NUREG-series publications; *Federal Register* notices; applicant, licensee, and vendor documents and correspondence; NRC correspondence and internal memoranda; bulletins and information notices; inspection and investigative reports; licensee event reports; and Commission papers and their attachments.

NRC publications in the NUREG series, NRC regulations, and Title 10, "Energy," in the *Code of Federal Regulations* may also be purchased from one of these two sources.

Some publications in the NUREG series that are posted at NRC's Web site address <http://www.nrc.gov/reading-rm/doc-collections/nuregs> are updated periodically and may differ from the last printed version. Although references to material found on a Web site bear the date the material was accessed, the material available on the date cited may subsequently be removed from the site.

Non-NRC Reference Material

Documents available from public and special technical libraries include all open literature items, such as books, journal articles, transactions, *Federal Register* notices, Federal and State legislation, and congressional reports. Such documents as theses, dissertations, foreign reports and translations, and non-NRC conference proceedings may be purchased from their sponsoring organization.

Copies of industry codes and standards used in a substantive manner in the NRC regulatory process are maintained at—

The NRC Technical Library
Two White Flint North
11545 Rockville Pike
Rockville, MD 20852-2738

These standards are available in the library for reference use by the public. Codes and standards are usually copyrighted and may be purchased from the originating organization or, if they are American National Standards, from—

Legally binding regulatory requirements are stated only in laws; NRC regulations; licenses, including technical specifications; or orders, not in NUREG-series publications. The views expressed in contractor-prepared publications in this series are not necessarily those of the NRC.

The NUREG series comprises (1) technical and administrative reports and books prepared by the staff (NUREG-XXXX) or agency contractors (NUREG/CR-XXXX), (2) proceedings of conferences (NUREG/CP-XXXX), (3) reports resulting from international agreements (NUREG/IA-XXXX), (4) brochures (NUREG/BR-XXXX), and (5) compilations of legal decisions and orders of the Commission and Atomic and Safety Licensing Boards and of Directors' decisions under Section 2.206 of NRC's regulations (NUREG-0750).

DISCLAIMER: This report was prepared as an account of work sponsored by an agency of the U.S. Government. Neither the U.S. Government nor any agency thereof, nor any employee, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for any third party's use, or the results of such use, of any information, apparatus, product, or process disclosed in this publication, or represents that its use by such third party would not infringe privately owned rights.

ABSTRACT

This final safety evaluation report documents the technical review of General Electric-Hitachi's (GEH's) Economic Simplified Boiling-Water Reactor (ESBWR) design certification. GEH submitted its application for the ESBWR design on August 24, 2005, in accordance with Subpart B, "Standard Design Certifications," of 10 CFR Part 52. The NRC formally docketed the application for design certification (Docket No. 52-010) on December 1, 2005.

The ESBWR design is a boiling-water reactor (BWR) rated up to 4,500 megawatts thermal (MWt) and has a rated gross electrical power output of 1,594 megawatts electric (MWe). The ESBWR is a direct-cycle, natural circulation BWR that relies on passive systems to perform safety functions credited in the design basis for 72 hours following an initiating event. After 72 hours, non-safety systems, either passive or active, replenish the passive systems in order to keep them operating or perform post-accident recovery functions directly. The ESBWR design also uses non-safety-related active systems to provide defense-in-depth capabilities for key safety functions provided by passive systems. The ESBWR standard design includes a reactor building that surrounds the containment, as well as buildings dedicated exclusively or primarily to housing related systems and equipment.

On the basis of its evaluation and independent analyses, as set forth in this report, the NRC staff concludes that GEH's application for design certification meets the requirements of 10 CFR Part 52, Subpart B, that are applicable and technically relevant to the ESBWR design. Appendix F includes a copy of the report by the Advisory Committee on Reactor Safeguards, as required by 10 CFR 52.53.

TABLE OF CONTENTS

ABSTRACT	iii
FIGURES AND TABLES	xxi
1.0 INTRODUCTION AND GENERAL DISCUSSION	1-1
1.1 Introduction	1-1
1.1.1 Metrication	1-2
1.1.2 Proprietary Information	1-2
1.1.3 Combined License Applicants Referencing the ESBWR Design	1-2
1.1.4 Additional Information	1-2
1.2 General Design Description	1-3
1.2.1 Scope of the ESBWR Design	1-3
1.2.2 Summary of the ESBWR Design	1-3
1.3 Comparison with Similar Facility Designs	1-24
1.4 Identification of Agents and Contractors	1-25
1.5 Performance of New Safety Features	1-25
1.6 Material Referenced	1-28
1.7 Drawings and Other Detailed Information	1-28
1.8 Interfaces with Standard Designs	1-28
1.9 Conformance with Regulatory Guidance	1-30
1.10 Index of Exemptions	1-31
1.11 Index of Tier 2* Information	1-31
1.12 COL Information Items	1-32
1.13 Requests for Additional Information	1-32
2.0 SITE CHARACTERISTICS	2-1
2.1 Geography and Demography	2-1
2.1.1 Site Location and Description	2-1
2.1.2 Exclusion Area Authority and Control	2-2
2.1.3 Population Distribution	2-3
2.2 Nearby Industrial, Transportation, and Military Facilities	2-5
2.2.1-2.2.2 Identification of Potential Hazards in Site Vicinity	2-5
2.2.3 Evaluation of Potential Accidents	2-6
2.3 Meteorology	2-7
2.3.1 Regional Climatology	2-8
2.3.2 Local Meteorology	2-22
2.3.3 Onsite Meteorological Measurement Program	2-23
2.3.4 Short-Term Atmospheric Dispersion Estimates for Accidental Releases	2-24
2.3.5 Long-Term Dispersion Estimates for Routine Releases	2-32
2.4 Hydrologic Engineering	2-37
2.4.1 Hydrologic Description	2-38
2.4.2 Floods	2-39
2.4.3 Probable Maximum Flood on Streams and Rivers	2-40
2.4.4 Potential Dam Failures	2-41
2.4.5 Probable Maximum Surge and Seiche Flooding	2-42
2.4.6 Probable Maximum Tsunami Flooding	2-43
2.4.7 Ice Effects	2-44

APPENDIX A. CHRONOLOGY

This appendix contains a chronological listing of routine licensing correspondence between the staff of the U.S. Nuclear Regulatory Commission (NRC) and GE – Hitachi Nuclear Energy (GEH) regarding the review of the ESBWR passive plant design under Project No. 717 and Docket No. 52-010.

Revisions to ESBWR Design Control Document

Revision	Date
0	August 24, 2005
1	February 5, 2006
2	October 31, 2006
3	February 22, 2007
4	September 28, 2007
5	June 1, 2008
6	August 31, 2009
7	March 29, 2010
8	October 25, 2010
9	December 2, 2010

Revisions to ESBWR Probabilistic Risk Assessment

Revision	Date
0	August 24, 2005
1	October 27, 2006
2	September 28, 2007
3	May 31, 2008
4	June 26, 2009
5	March 2, 2010
6	October 7, 2010

11. ABSTRACT (200 words or less)

This final safety evaluation report documents the technical review of General Electric-Hitachi's (GEH's) Economic Simplified Boiling-Water Reactor (ESBWR) design certification. GEH submitted its application for the ESBWR design on August 24, 2005, in accordance with Subpart B, "Standard Design Certifications," of 10 CFR Part 52. The NRC formally docketed the application for design certification (Docket No. 52-010) on December 1, 2005. The ESBWR design is a boiling-water reactor (BWR) rated up to 4,500 megawatts thermal (MWt) and has a rated gross electrical power output of 1,594 megawatts electric (MWe). The ESBWR is a direct-cycle, natural circulation BWR that relies on passive systems to perform safety functions credited in the design basis for 72 hours following an initiating event. After 72 hours, non-safety systems, either passive or active, replenish the passive systems in order to keep them operating or perform post-accident recovery functions directly. The ESBWR design also uses nonsafety-related active systems to provide defense-in-depth capabilities for key safety functions provided by passive systems. The ESBWR standard design includes a reactor building that surrounds the containment, as well as buildings dedicated exclusively or primarily to housing related systems and equipment. On the basis of its evaluation and independent analyses, as set forth in this report, the NRC staff concludes that GEH's application for design certification meets the requirements of 10 CFR Part 52, Subpart B, that are applicable and technically relevant to the ESBWR design. Appendix F includes a copy of the report by the Advisory Committee on Reactor Safeguards, as required by 10 CFR 52.53.
