Subject: Proposed Met License Condition for Ross

Mike

The following is the proposed pre-operational meteorological station license condition:

At least 90 days prior to the preoperational inspection, the licensee shall submit its analysis of the meteorological data collected to demonstrate long-term meteorological conditions at the Ross ISR Project. The licensee shall continue to collect meteorological data on a continuous basis at a data recovery rate of at least 90 percent and may not commence operations until the data collected are verified in writing by NRC headquarters staff to be representative of long-term meteorological conditions at the Ross ISR Project. The data collected on-site shall include, at a minimum, wind speed, wind direction, an annual wind rose and a summary of the stability classification.

To support the verification by NRC headquarters staff, the licensee must submit to the NRC a written justification of the similarity or validity of the data. This justification must include an analysis of the statistical data presented to illustrate confidence in the representativeness of the data.

In essence, should Strata elect to discontinue monitoring at your met station, you need to submit the above analysis prior to the inspection. If Strata elects to continue monitoring the met station during operations, then you will need to submit an amendment request to remove this condition and obtain an operational license condition to designate the ongoing station monitoring/reporting.
