General Comment

I am a strong supporter of investment in renewable energy, however I also consider nuclear to be an important technology for the generation of affordable, abundant and most importantly clean energy. In this regard, I strongly endorse the following; "The Energy From Thorium Foundation believes that to keep America's national interest secure that we should be leading the world in the development of new nuclear technologies. This is due to economic considerations and the possibility of another country developing and economically and technologically disruptive technology before America. We believe that submissions that help to amend the strategic plan to include competition will help bolster the argument that America needs to be developing a thorium based Molten Salt Reactor and we need a regulatory environment that will allow industry to develop this technology in an accelerated time from (i.e. competitive time frame)."
