General Comment

The NRC needs to modify its first strategic goal. It currently says:

(1) to ensure the safe use of radioactive materials...

It SHOULD say:

(1) to maximize public safety from the use of radioactive materials...

The intention here is to broaden the vision of the NRC to allow you to include the expected effects of the other alternatives to radioactive materials. For example, you currently (AFAIK) will make rules intended to improve public safety seeing only the effects of the rule on NPPs, but do NOT look at the fact that making NPPs too expensive will result in coal plants that are much MORE dangerous to the public safety than just leaving the NPP alone.

Please broaden your viewpoint to include the consequences of your rule making.
