December 16<sup>th</sup>, 2013

Secretary  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001  
ATTN: Rulemaking & Adjudications Staff

Dear Chairman McFarlane:

People in our community feel that the spent fuel pools at Indian Point pose a grave risk to our health and safety. This assessment is backed up with solid scientific evidence from many sources. We do not understand how the NRC can conclude that a generic study can address the highly unique impacts of Indian Point.

Enclosed please find the signatures of many in our community who are asking that you take additional measures for our health and safety. That is, after all supposed to be the guiding mission of your organization. Please adhere to your guidelines of public safety and require the industry to move waste into dry cask storage.

We look forward to hearing from you in this matter and hope that our input will have an impact on what is decided and how it is implemented.

Sincerely,

*The Beloved Earth Community*

# PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate**. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1 of 15 pages

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles; as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation.

# **PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT**

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors **or from spent fuel storage** Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate**. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation.
