Subject: 2014 United Nuclear Corporation's Church Rock Surety Update Acceptance

On April 23, 2014, the NRC received United Nuclear Corporation's Church Rock site's bond update for its most recent surety update submittal. The submittal included the original signed duplicate rider, a notarized "Acknowledgement By Surety," and a notarized "Power of Attorney" document. UNC last completed a comprehensive re-baselining of the surety calculation in September 2004; however, the U.S. Environmental Protection Agency is currently directing a Site -Wide Supplemental Feasibility Study (SWSFS) at the site which is expected to be completed by 2014. A review of the results of the SWSFS will be compared against the conditions used in the initial re-baseline calculation. Based on my review, I find the rider for the performance bond in compliance with 10 CFR 40 Appendix A, Criteria 9 and 10. The revised surety applied an increase in the CPI-U of 1.13% for the period February 2013 (using the end of February 2013 index = 232.166) through February 2014 (using the end of February 2014 index= 234.781), resulting in an increase of \$36,549 from the previous amount for a new surety total of \$3,270,959.
