SAN ONOFRE 2 & 3 - PROPOSED PREOPERATIONAL MONITORING PROGRAM
(TAR-3640)

In general the applicant's program is satisfactory. However, he should consult Regulatory Guide 4.8 in order to bring Unit 1 Environmental Radiological Monitoring Program up to date to serve as a preoperational program for Units 2 and 3.

It is recommended that revisions of the Unit 1 Environmental Technical Specifications be made to reflect the Regulatory Guide 4.8 operational environmental radiological monitoring programs, analytical sensitivities, reporting format and reporting requirements.

Two specific areas of interest are as follows:

The locations of animals giving milk for human consumption should be updated. If any animal (cow or goat) is located within 5 miles of the site, then sampling and analysis of milk should be initiated at the worst calculated dose locations (See Regulatory Guide 4.8)

Evaluation of the air-vegetable-pathway at the locations of highest calculated dose should be made, and green leafy vegetable sampling and analysis performed. A garden census should be initiated as recommended in Regulatory Guide 4.3.
