H. B. ROBINSON STEAM ELECTRIC PLANT, UNIT NO. 2
DOCKET NO. 50-261/LICENSE NO. DPR-23
DELAY IN SUBMITTAL RELATED TO BULLETIN 88-11 (TAC NO. M72160)

Gentlemen:

The purpose of this letter is to document a delay in submittal of information required for closeout of NRC Bulletin 88-11 related to pressurizer surge line thermal stratification for the H. B. Robinson Steam Electric Plant, Unit No. 2 (HBR2).

The Robinson Plant has committed to provide confirmation that an analysis performed for the surge line stratification issue using generic data is applicable to the Robinson Plant. Instrumentation has been provided on the surge line to collect data to allow the confirmatory analysis to be performed. However, as discussed with the NRC Project Manager, software problems have been experienced with the data acquisition system. Data has been obtained and is being evaluated. To strengthen the analysis, Robinson's intention is to obtain additional data.

The Plant is currently operating under a Justification for Continued Operation (JCO) which allows ten complete heatup/cooldown cycles; at this time, three cycles remain under the JCO. Carolina Power and Light Company anticipates that the additional data will be collected at the next scheduled cooldown. Therefore, it is necessary to delay the date for submittal of confirmation of applicability of the generic analysis until seven months after the start of Refueling Outage 16 to allow for collection of the additional data and performance of the necessary analysis.
