LESSONS LEARNED SHORT TERM REQUIREMENTS

Dear Mr. Denton:

In accordance with your request of October 30, 1979, Carolina Power & Light Company (CP&L) provides, as an attachment to this letter, documentation of the method of implementation of all Category A requirements for our H. B. Robinson plant. Definition of the implementation category is consistent with Enclosure 2 to your letter. As has been reviewed with your staff, all Category A items have been completely implemented in accordance with the positions and clarifications contained in Enclosure 1 of your letter, as modified by subsequent clarifications by members of your staff in discussions with utility owners' group or CP&L representatives.

Regarding one item, Plant Shielding Review - Section 2.1.6.b, CP&L has completed the review and has found a number of areas requiring action in order to complete the requirements for Category B implementation. Because of the potentially severe impact on plant structures that these actions might impose, if the proper approach is not taken to resolve the items identified in our review, we believe it is important to discuss our results with you as soon as possible after January 1, 1980. The purpose of this discussion is to ensure acceptance of our methodology, our proposed means to reduce radiation exposure in certain plant areas, and the assumptions used in arriving at radiation source terms. Accordingly, we request that your staff review this item as expeditiously as possible. Our staff will be calling soon after the first of the year to establish a meeting date.

We trust the attached information is suitable to meet your request.

Yours very truly,

M. A. M. Duffie

for E. E. Utley
