1979 ANNUAL OPERATING REPORTNOTES TO US NRC REGULATORY GUIDE 1.16 REPORT

1. The total man-rem was compiled by allocating the monthly exposure of each individual to the six work and job functions according to fixed percentages.

The percentages were established on a monthly basis for each work class from plant radiation work permit records.

2. The number of personnel was compiled by counting each individual as a decimal fraction proportioned to his exposure under each corresponding work and job function.
3. The totals for number of personnel are not rounded numbers because of truncation of the decimal fractions by the computer before summation.
