H. B. ROBINSON STEAM ELECTRIC PLANT, UNIT NO. 2
DOCKET NO. 50-261/LICENSE NO. DPR-23
SCHEDULE FOR SUBMITTAL OF DIESEL GENERATOR STUDY

Gentlemen:

The purpose of this letter is to formally inform the NRC of a delay in the schedule for submittal of the emergency diesel generator study currently being performed for the H. B. Robinson Steam Electric Plant, Unit No. 2 (HBR2). The delay was previously discussed with the NRC staff at a meeting in White Flint on November 22, 1991.

Carolina Power & Light Company's (CP&L) letter dated July 2, 1991, which transmitted the results of the HBR2 Electrical Distribution System Voltage Study, provided an estimate of the fourth quarter of 1991 for completion of the diesel study. Due to demands on technical resources for support of the HBR2 Electrical Distribution System Functional Inspection and for the substantial electrical work associated with the GDC-17 issue resolution at CP&L's Brunswick Plant, the completion schedule for the diesel study has been delayed until the first quarter of 1992. The results of the study will be submitted after completion.

Additionally, regarding the electrical system voltage study results provided earlier this year, CP&L wishes to reiterate the belief expressed in our July 2, 1991 letter that a working meeting at our Corporate Office, similar to that held in October 1988, would be the most effective mechanism for the NRC staff to perform an in-depth review of the electrical system voltage study calculation. Please contact Mr. R. W. Prunty at (919) 546-7318 to set up a meeting or if you have any questions regarding this submittal.

Yours very truly,

G. E. Vaughn
