H. B. ROBINSON STEAM ELECTRIC PLANT, UNIT NO. 2
DOCKET NO. 50-261
LICENSE NO. DPR-23
REQUEST FOR LICENSE AMENDMENT

Dear Mr. Eisenhut:

In accordance with the Code of Federal Regulations, Title 10, Part 50.90 and Part 2.101, Carolina Power & Light Company (CP&L) submits for approval the attached changes to the H. B. Robinson Unit No. 2 Technical Specifications. Changes are indicated by vertical lines in the right hand margin of the affected pages. In accordance with 10CFR170.12(c), we have determined that this revision constitutes a Class II Amendment. Accordingly, our check for \$1,200 is enclosed.

The first change revises the definition of the term "Operable." This change is forwarded as requested by your letter of April 10, 1980. Because H. B. Robinson does not have Standard Technical Specifications, the format was adjusted to fit the Robinson Technical Specifications. Specifically, the explanation concerning power supplies was included in the definition because this appeared to be the most logical place for it.

Your letter also requested that procedures be implemented or modified to assure that the requirements for operability as described in this change are complied with. CP&L believes that the procedures presently in place at H. B. Robinson adequately assure the requirements for operability are met. However, the plant procedures will be reviewed in light of this change, and any required modifications will be completed and implemented by June 30, 1980.

The second attached change revises the edition of ANSI N18.7 and revision of Regulatory Guide 1.33 to which the plant is committed. These changes are required as the result of commitments made to Region II of the Office of Inspection and Enforcement.
