ADMINISTRATIVE PROCEDURE VIOLATION

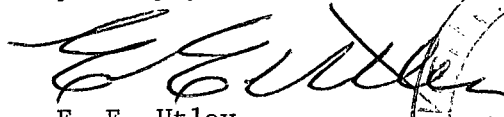

Dear Mr. O'Leary:

A violation of plant administrative procedures at the H. B. Robinson Plant Unit No. 2 occurred on January 15, 1973 and is reported in accordance with paragraph 6.6.3.9, Technical Specifications.

At 1530 on January 15, 1973, the seal water injection filters on the charging pump line were replaced without the necessary Special Radiation Work Permit. A Special Radiation Work Permit had been issued for repair of a leak on the seal water injection line at the filter, but the permit did not cover filter replacement. As a consequence of this action the two individuals involved exceeded the plant administrative weekly allowable dose limit of 300 mrem. One individual received 672 mrem whole body and the second individual received 340 mrem whole body. The dose received was known within three hours of the incident by reading of the TLD's carried by the individuals during the incident. These individuals were not permitted to work in the radiation area for the remainder of the week involved.

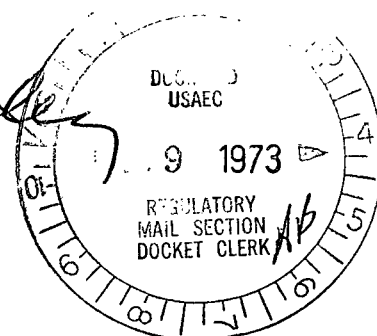

A Plant Nuclear Safety Committee meeting was held on January 18, 1973 to review the incident. All individuals involved were present. At the meeting it was determined that the individuals involved were knowledgeable of proper administrative procedures but in their zeal to complete an authorized job satisfactorily, they extended the scope of the work and performed an unauthorized task. All plant personnel have been reindoctrinated in the absolute necessity to comply in meticulous detail with Special Radiation Work Permits.

Very truly yours,

E. E. Utley
Vice President
Bulk Power Supply
