030-11312

4. LICENSE NUMBER(S)

13-16598-01

5. DATE(S) OF INSPECTION

7/28/14

LICENSEE:

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- ☒ 1. Based on the inspection findings, no violations were identified.
- ☐ 2. Previous violation(s) closed.
- ☐ 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

Non-cited violation(s) were discussed involving the following requirement(s):

- ☐ 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.

(Violations and Corrective Actions)

Statement of Corrective Actions

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Field Office Inspection

Temporary Job Site Inspection

PROGRAM SCOPE

This was a routine inspection of a small manufacturing company that employs 30 individuals. The licensee possessed two specifically licensed fixed gauges and produced approximately 500,000 clay targets a day. The inspector determined that the RSO was involved with use and oversight of the gauges. The licensee leak tested the gauges at the required three-year frequencies as required. The inspector determined that inventories and shutter checks were performed at required frequencies.

The licensee is authorized to remove and/or relocate gauges, however, according to the RSO, gauges are relocated and removed by the manufacturer. The licensee does not perform any service or maintenance activities on its gauges because those activities were performed by the manufacturer.

Performance Observations

The inspector observed that both gauges were possessed consistent with the licensee's current inventory record. The RSO demonstrated survey techniques used if/when gauges are relocated. Proper lock-out and leak test procedures were also adequately described. The inspector interviewed plant workers which revealed that under no circumstances would a vessel be entered without RSO supervision of the implementation of lock-out/tag-out procedures. The inspector performed independent and confirmatory radiation measurements which indicated similar results as noted in the licensee's survey records.

No violations of NRC regulatory requirements were identified during this inspection.
