ISSUANCE OF RETYPED TECHNICAL SPECIFICATIONS

Dear Mr. Case:

On August 13, 1976 Carolina Power & Light Company (CP&L) submitted copies of a retyped version of the H. B. Robinson Unit 2 Technical Specifications. We asked that the NRC review these specifications (which involved no changes, only a retyping) and issue them as a replacement to the existing technical specifications. We undertook the retyping effort in order to standardize the format between the NRC and CP&L, and to insure that future changes to the technical specifications were adequately controlled and administered.

Our original request has now gone over one year without being acted upon. As we stated in our August 13, 1976 letter, there are no changes to the technical specifications involved in this action. We are asking at this time that the Commission expeditiously issue the retyped technical specifications so that assurance can be provided of consistency in the technical specifications. We have maintained up-to-date copies of the retyped version, including all changes issued by the Commission since August 13, 1976; and a copy is enclosed with this letter to facilitate your issuance of the retyped technical specifications. Beginning with the interim fire protection technical specifications submitted in response to your letter of June 16, 1977, all our requests for amendment of H. B. Robinson Unit 2 technical specifications will be in the format of the retyped version. This has become necessary in order for us to facilitate records of proposed changes. In the event the Commission does not wish to issue the retyped technical specifications, we would appreciate being informed as soon as possible of your position.

Yours very truly,

B. J. Furr
