

United States Nuclear Regulatory Commission

*Protecting People and the Environment*

# THE NRC: WHO WE ARE AND WHAT WE DO

# WHO WE ARE

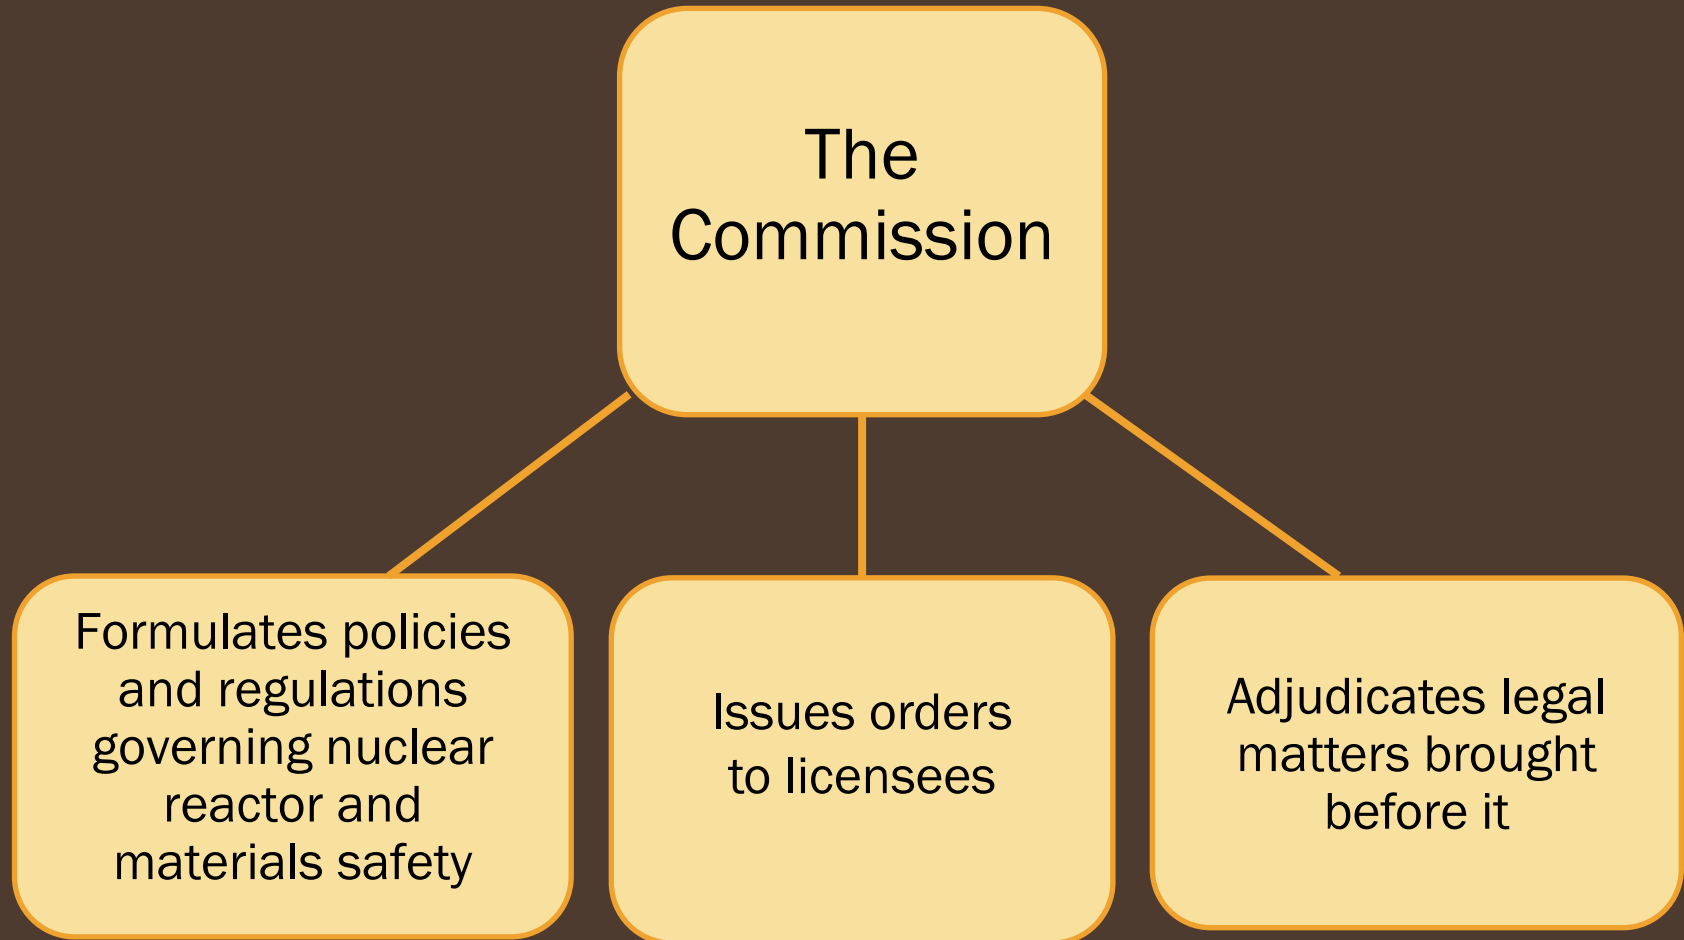

The Energy Reorganization Act  
of 1974

Established the NRC to  
independently regulate  
commercial use of nuclear  
material, including  
nuclear power.

Other duties of the former  
Atomic Energy Commission were assigned to the  
Department of Energy.

# WHO WE ARE

# WHO WE ARE

The NRC is headed by five Commissioners, all nominated by the President and confirmed by the Senate for staggered five-year terms. No more than three can be from the same political party.

The President designates one member of the Commission to serve as Chairman and official spokesperson.

# WHO WE ARE

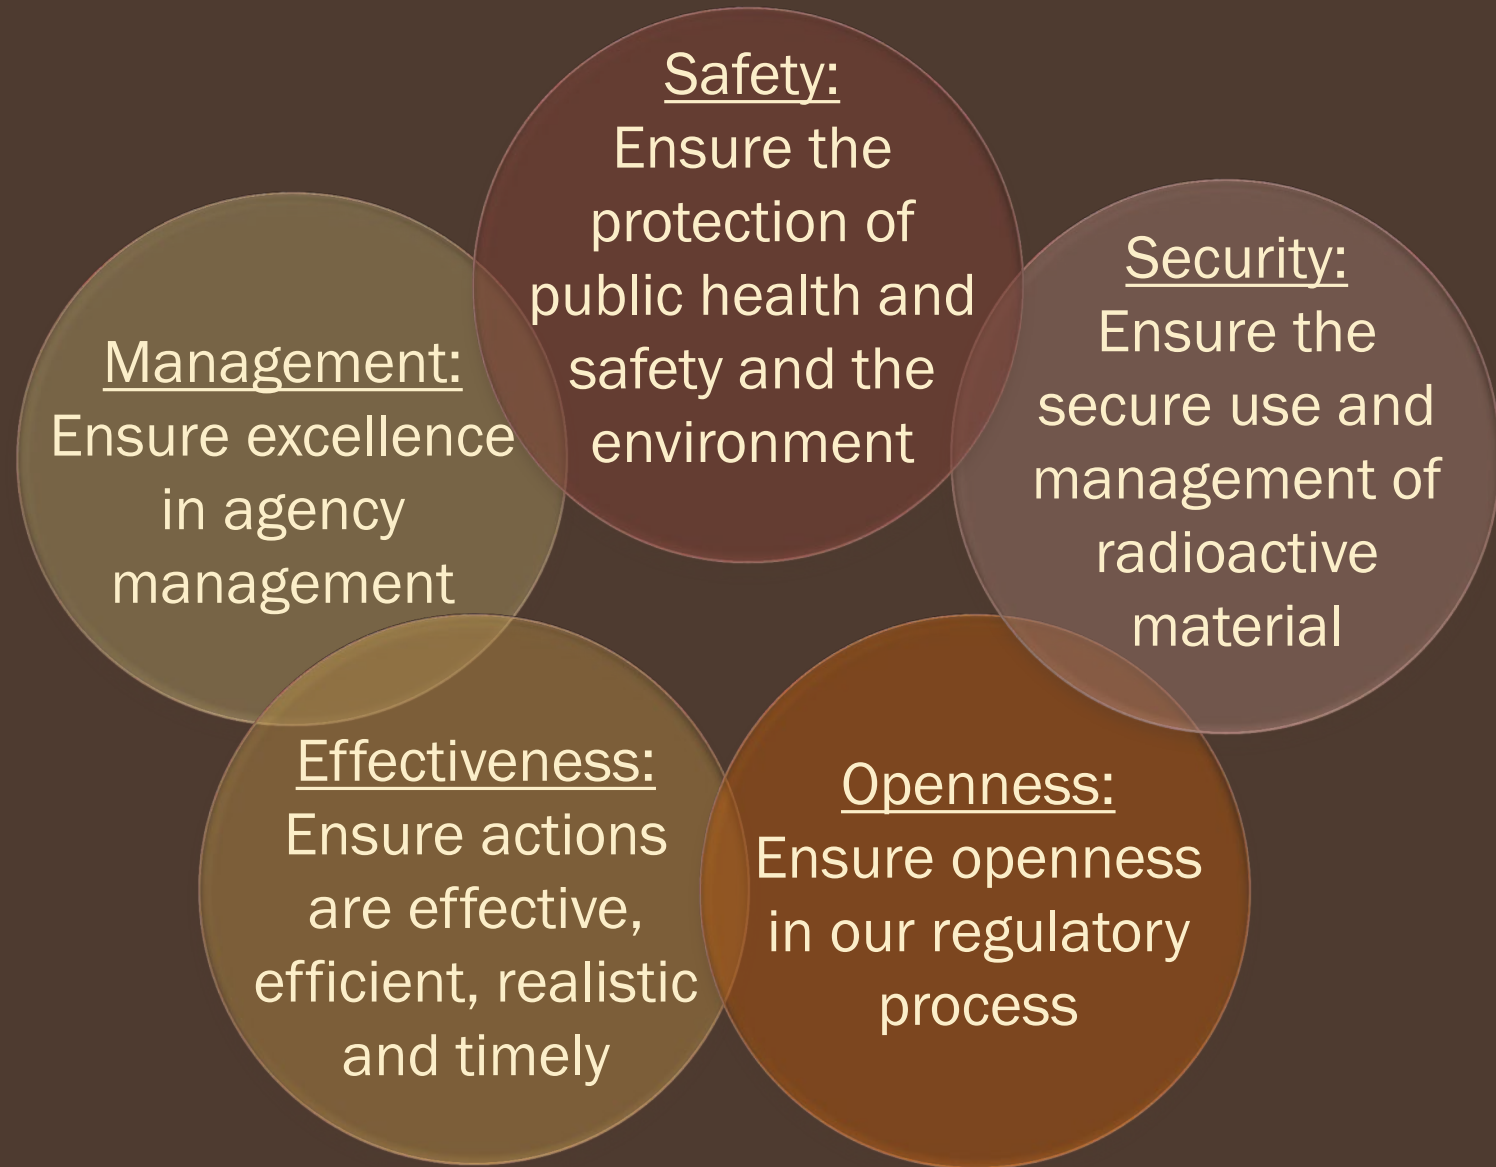

The NRC employs approximately 3,900 people among its suburban Maryland headquarters and four regional offices in Pennsylvania, Georgia, Illinois and Texas including at least two Resident Inspectors at each nuclear power plant site.

The NRC receives a budget each fiscal year from Congress. By law, the NRC must recover, through fees billed to licensees, approximately 90 percent of its budget authority, which in FY 2014 equals \$930.7 million of the total \$1,055.9 million budgeted.

# OUR MISSION

**We license and regulate the Nation's civilian use of byproduct, source, and special nuclear materials to ensure adequate protection of public health and safety, promote the common defense and security, and to protect the environment.**

# OUR OBJECTIVES

# SOME NUCLEAR FACTS

100 nuclear power plants supply about 20 percent of the electricity in the U.S.

Nuclear materials are used in medicine for cancer treatment and diagnosis.

Nuclear materials are widely used in industry, such as in density gauges, flow measurement devices, radiography devices and irradiators.

Small amounts of radioactive material are used in common items such as smoke detectors, exit signs and some watches.

# SOME RADIATION FACTS

Radiation occurs naturally in the soil, air and water. The average person in the U.S. is exposed to about 620 millirem of radiation a year.

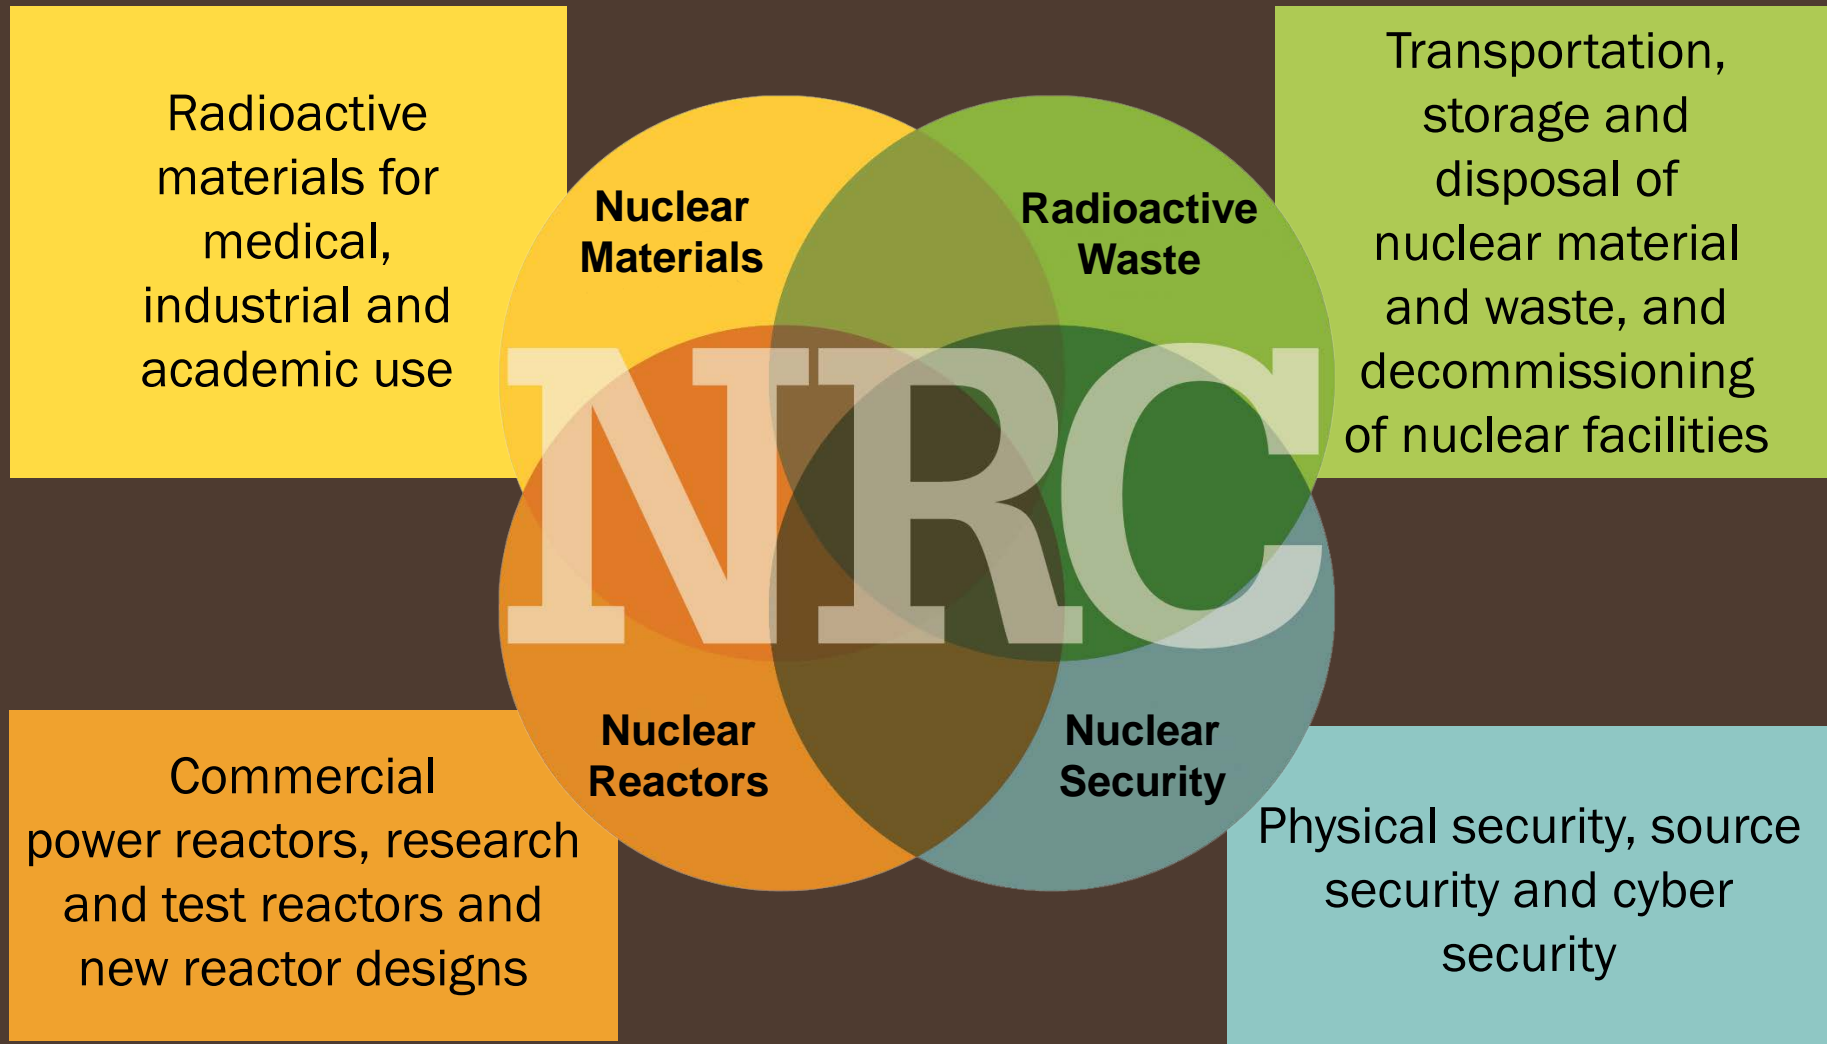

- Half of that exposure comes from natural sources (also called background radiation).
- The other half largely comes from nuclear medical exams and treatments.

# SOME RADIATION FACTS

## Sources of Radiation Exposure in the United States

# THE NRC REGULATES:

# WHAT WE DON'T DO:

Regulate nuclear weapons, military reactors or space vehicle reactors (These are regulated by other federal agencies.)

Lobby for nuclear power (The nation's nuclear agenda is set by the President and the Congress.)

Own or operate nuclear power plants

Regulate naturally occurring radon or X-rays (These are regulated by states or other federal agencies.)

# WHAT WE DO:

- Set Rules
- Licensing
- Oversight
- Enforcement
- Evaluation
- Provide Support
- Incident Response

# WHAT WE DO: SET RULES

The NRC establishes rules that users of radioactive material must follow. These rules protect workers and the public from the potential hazards of radioactivity.

Before writing or changing the regulations, the NRC solicits and considers the views of the public, industry representatives, researchers, state officials, scientists and technical experts.

**REGULATIONS**

# WHAT WE DO: LICENSING

Any organization or individual intending to have or commercially use nuclear materials that are covered by the NRC's programs must obtain a license from the NRC or an Agreement State (a state that has entered into an agreement with the NRC to regulate nuclear materials).

These licenses specify the types and quantities of material, the activities it may be used for and additional conditions.

# WHAT WE DO: OVERSIGHT

The NRC inspects licensed facilities to ensure they meet regulations and the terms of their license. By regularly assessing facility performance, the NRC is able to provide an objective perspective. The NRC also investigates any allegations of wrongdoing.

# WHAT WE DO: ENFORCE REGULATIONS

When violations are uncovered, the NRC can:

- Issue a notice of violation;
- Impose fines of up to \$140,000 per violation, per day;
- Modify, suspend or revoke a license, for very serious instances of noncompliance;
- Prohibit individuals who have engaged in deliberate misconduct from working in NRC jurisdiction; and
- Refer apparent wrongdoing violations to the Department of Justice.

# WHAT WE DO: EVALUATION

- The NRC collects and analyzes information about reported events at reactors and materials facilities to assess safety and identify any potential weaknesses in design, operations, procedures or equipment.
- The NRC also identifies and addresses potential safety-related issues that are common among these facilities (called generic safety issues).

# WHAT WE DO: SUPPORT

Regulatory research provides technical advice, analytical tools and information to support NRC decisions, focusing on safety and security.

Two committees provide independent advice and review of NRC staff proposals:

- Advisory Committee on Reactor Safeguards
- Advisory Committee on Medical Uses of Isotopes

# WHAT WE DO: INCIDENT RESPONSE

The NRC maintains an active program to ensure readiness and response to an event at a nuclear facility potentially affecting public health and safety. Through response centers at its headquarters and regional offices, the NRC provides consultation, support, and assistance to licensees and public officials.

# REGULATING REACTORS

The NRC's safety philosophy includes:

- Multiple, redundant and independent safety systems
- Multiple physical barriers, including robust reactor containment to prevent radioactive release
- Testing of emergency plans

# REGULATING REACTORS

The NRC verifies compliance with regulations. Licensees are required to report plant safety data and events to the NRC.

In addition to the NRC Resident Inspectors onsite who perform daily inspections, special inspectors also perform periodic inspections.

# REGULATING REACTORS

The NRC requires:

Regular maintenance to assure equipment is repaired or replaced in a timely manner, and

Continual training and qualification of nuclear plant operators.

# REGULATING NEW REACTORS

In 2012, the NRC issued new reactor licenses for the first time in over a decade and is currently reviewing **8** new reactor license applications.

The review process begins with the submission of a combined license application. Other steps include safety and environmental reviews and opportunities for public input before the Commission makes its decision.

## New Reactor Licensing Process

# REGULATING MATERIALS

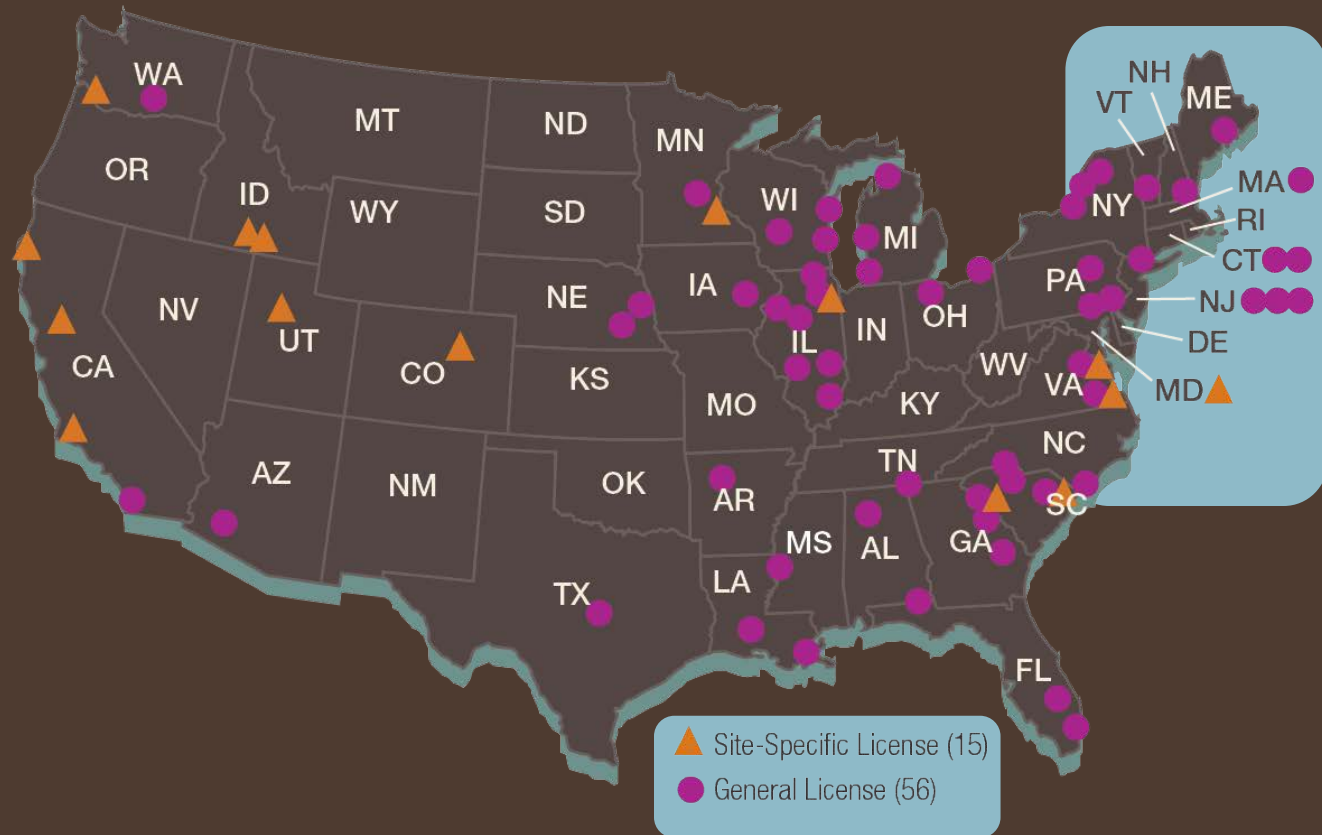

## **The NRC's materials program covers:**

- Facilities that use radioisotopes to diagnose and treat illnesses;
- Devices such as radiography cameras and nuclear gauges;
- Decommissioning and environmental remediation; and
- All phases of the nuclear fuel cycle from uranium recovery to enrichment to fuel manufacture to spent fuel storage and transportation.

# REGULATING WASTE

## Licensed and Operating Independent Spent Fuel Storage Installations by State

The NRC oversees the safe storage of spent nuclear fuel including 71 spent storage facilities and about 72,000 metric tons of spent fuel stored at reactor sites.

# REGULATING WASTE

The NRC also certifies spent fuel storage and transportation casks, approves transport routes and security plans, and regulates disposal of nuclear waste

# REGULATING SECURITY

The NRC has long recognized the importance of securing nuclear facilities and materials.

Nuclear power plants are built to withstand disasters both natural and man-made, and are among the best-protected commercial facilities in the U.S.

The NRC works closely with DHS, the FBI and others to monitor threat conditions.

# REGULATING PHYSICAL SECURITY

The NRC requires such security measures as:

- Well-armed and well-trained security forces;
- Surveillance and perimeter patrols;
- State-of-the-art site access equipment and controls;
- Physical barriers and detection zones; and
- Intrusion detection systems and alarm stations.

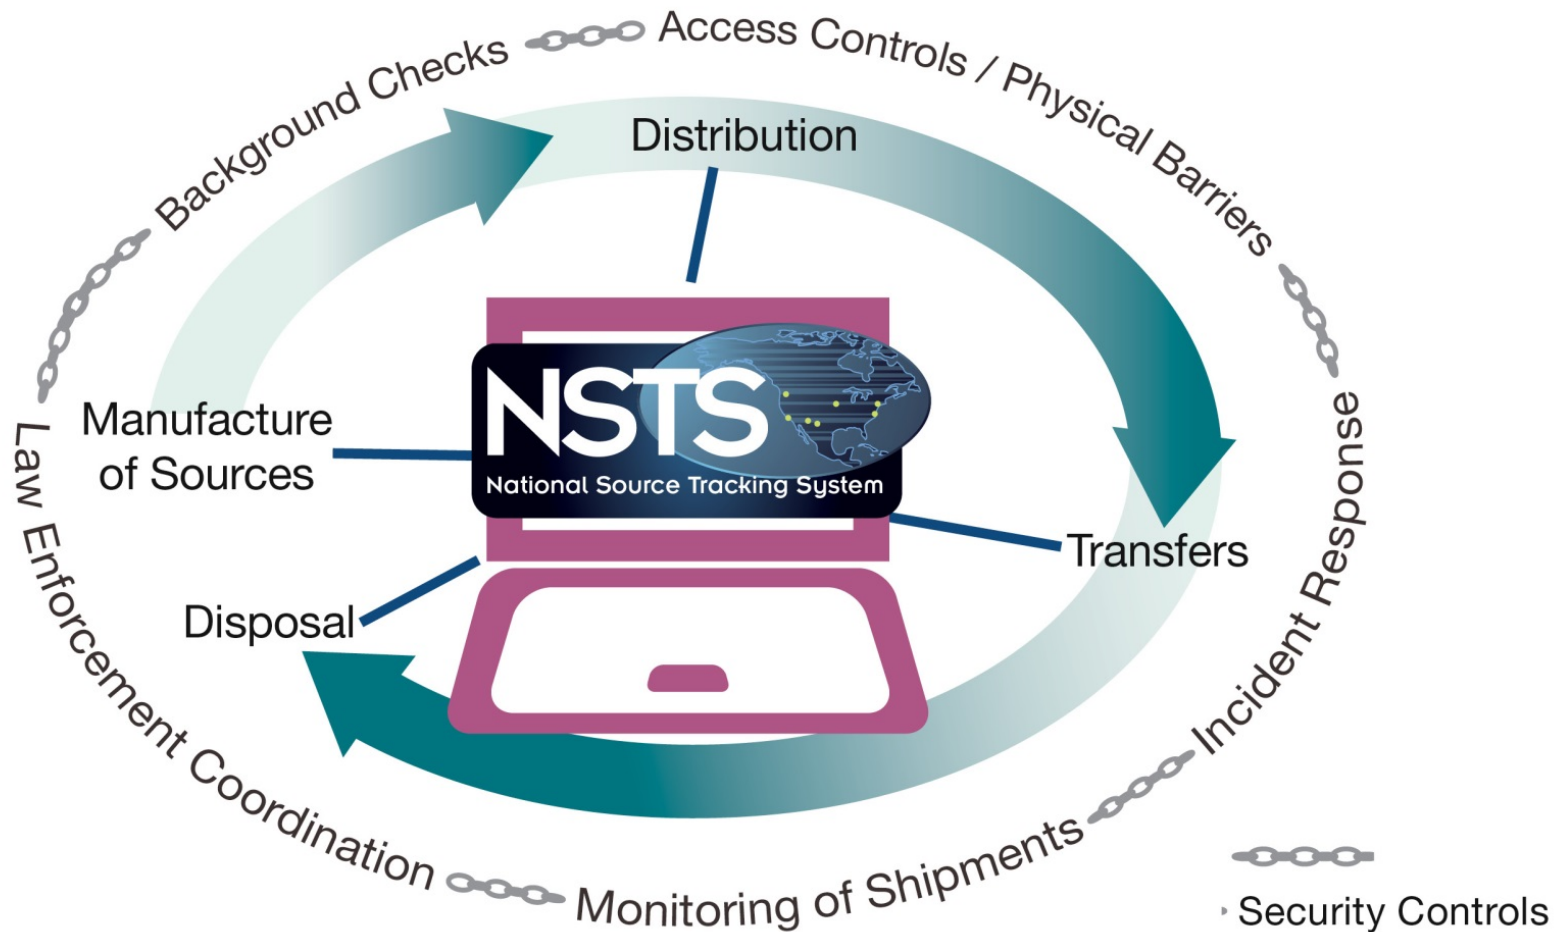

## Security Components

# REGULATING SOURCE SECURITY

## Life-Cycle Approach to Source Security

# REGULATING CYBER SECURITY

- The NRC conducts regular cyber security inspections of nuclear plants to ensure adequate protection of systems and the information they contain from sabotage or malicious use.
- The NRC's cyber security staff includes technology and threat experts who constantly evaluate and identify emerging cyber-related issues.

# REGULATING SECURITY

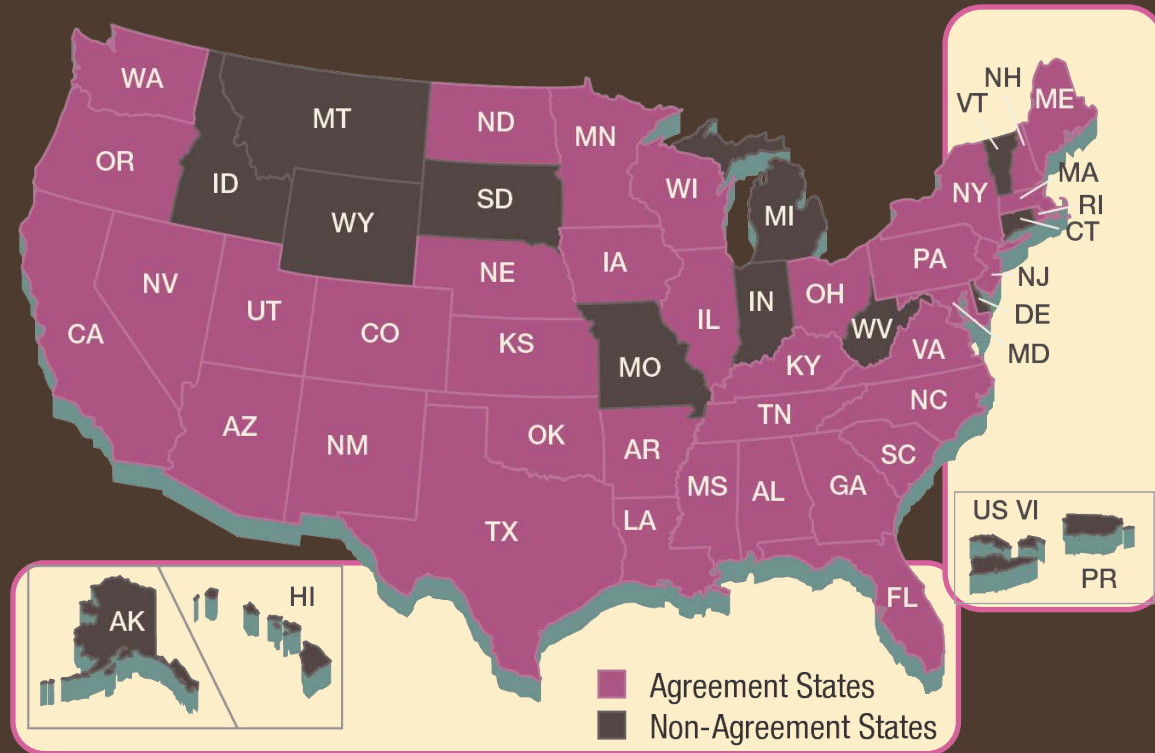

The NRC Operations Center is staffed 24 hours a day to monitor events and initiate response activities. The staff is prepared to work with other federal agencies under the National Response Framework to respond to significant incidents involving NRC licensees. In addition, the NRC conducts regular exercises to test licensee emergency response and uses mock adversaries to test security response.

# PARTNERS IN REGULATION

The NRC has granted 37 Agreement States authority to regulate certain radioactive material. Those states develop regulations and appoint officials to ensure the materials are used safely and securely. The NRC retains authority over nuclear reactors, fuel fabrication facilities and certain amounts of radioactive material that can fission (split apart).

## Agreement States

# PARTNERS IN REGULATION

The NRC works with many other agencies and organizations including:

- Department of Energy
- Environmental Protection Agency
- Department of Homeland Security
- Federal Bureau of Investigation
- Department of Health and Human Services
- U.S. Congress
- International Atomic Energy Agency

# OPEN TO THE PUBLIC

The NRC places a high priority on keeping the public and stakeholders informed of its activities. At [the NRC public website](#), you can:

- Find public meeting dates and transcripts;
- Read NRC testimony, speeches, press releases and policy decisions;
- Access the agency's Electronic Reading Room to find NRC publications and documents; and
- Connect with the NRC on social media sites.

The screenshot shows the U.S. NRC website homepage. At the top is a navigation bar with links: HOME, FAQ, GLOSSARY, FACILITY LOCATOR, WHAT'S NEW, SITE HELP, INDEX A-Z, CONTACT US, BROWSE ALOUD, and EMAIL UPDATES. Below this is the U.S. NRC logo and a search bar. A prominent yellow button says "REPORT A SAFETY CONCERN". A secondary navigation bar lists: NUCLEAR REACTORS, NUCLEAR MATERIALS, RADIOACTIVE WASTE, NUCLEAR SECURITY, PUBLIC MEETINGS & INVOLVEMENT, NRC LIBRARY, and ABOUT NRC.

The main content area features a large banner titled "PROTECTING PEOPLE and the ENVIRONMENT" with a photo of a family. To the left of the banner is a "Facility Locator" section with a map and a "STAY CONNECTED" section with social media icons (Blog, Facebook, Twitter, YouTube, RSS, etc.). Below the banner is a "Spotlight" section listing various documents and reports.

On the right side, there are several sections: "Commission Meeting Webcasts" with the next meeting date (September 10, 2014), "Event Reports", "ADAMS Public Documents", "Open Government", "Students & Teachers", and "In a Nuclear Emergency...". A "News & Speeches" section on the left shows a news item from August 1, 2014, and a calendar for August 2014.
