Gentlemen:

Please note the following change of name in our address:

CHANGE FROM: Mr. G. M. Simpson, QA Specialist
Carolina Power & Light Company
Post Office Box 1087
Southport, North Carolina 28461

CHANGE TO: Mr. F. R. Coburn, Quality Control Specialist
Carolina Power & Light Company
Post Office Box 1087
Southport, North Carolina 28461

50-261
50-324
50-325
50-400
50-401
50-402
50-403

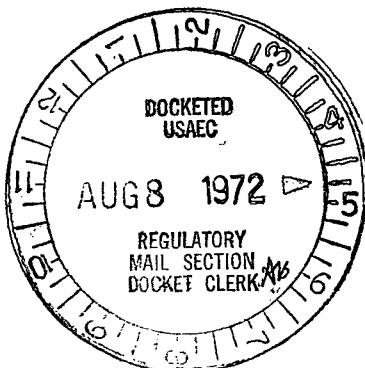

Thank you.

Very truly yours,

F. R. Coburn

Quality Control Specialist

4334

In the specific cases where failures were experienced, paddle-type flow switches were installed in the residual heat removal (RHR), and reactor water clean-up systems. While the broken parts were not transported into the primary coolant system and did not interfere with system function, the broken parts could have interfered with valve operability resulting in loss of system function and the ability to isolate the systems. If the low pressure coolant injection (LPCI) mode of the RHR had been used, the broken parts could have been transported into the primary coolant system.

Reactor licensees should examine existing or proposed facilities for devices, instrumentation or otherwise, installed in piping systems where failure would result in loss of parts within the system. Should such devices be currently installed or planned, specific design review of each installation should be made to ascertain acceptability.
