HOT LEG INJECTION DEFEAT

Regulatory

File Cy.

Dear Mr. O'Leary:

This is to inform you that on November 24, 1972, the safety injection signals to hot let injection valves SI-866A and SI-866B were removed. This modification had been approved as per Technical Specification change No. 9.

In our letter to you proposing this change, we stated that the control switches for these valves would be changed to key operated switches. These switches are not available at this time and will not be available for approximately sixty days. As a temporary mode of operation the breakers to the valves will be opened and placed under an administrative clearance controlled by the Shift Foreman. This will prevent the valves from being energized without the Shift Foreman's approval. The key switches will be installed as soon as they are available.

Yours very truly,

E. E. Utley  
Vice President  
Bulk Power Supply
