SUBJECT: SUMMARY OF A PUBLIC TELECONFERENCE ON MARCH 26, 2015,
WITH MEMBERS OF THE AP1000 DESIGN CENTER TO DISCUSS
AP1000 LICENSING AND TECHNICAL ISSUES

The U.S. Nuclear Regulatory Commission (NRC) staff held a Category 2 public teleconference with Duke Energy Florida (DEF) and members of the AP1000 design center on March 26, 2015. The purpose of the meeting was to discuss AP1000 combined license (COL) issues associated with the safety review for the Levy Nuclear Plant (LNP) Units 1 and 2 COL application.

The meeting notice can be found in the Agencywide Documents Access and Management System (ADAMS) under Accession Number ML15051A476. The meeting notice is also posted on the NRC's public website. Enclosures 1 and 2 are the meeting agenda and attendance list for the meeting, respectively. The other documents referenced during the discussion can be found at the ADAMS Accession Numbers given below:

- 1) Westinghouse Presentation, "AP1000
Incontainment Refueling Water Storage
Tank (IRWST) Condensate Return Status" — ML15082A072
- 2) Updated version of Presentation, "AP1000
IRWST Condensate Return Status" — ML15089A101

CONTACT: Don Habib, NRO/DNRL

Summary of Meeting:

On March 26, 2015, the NRC staff conducted a public teleconference with representatives from DEF and members of the AP1000 design center to discuss issues to support the safety review for the LNP Units 1 and 2 COL application. Specifically, the meeting discussed an update to the Westinghouse Electric Company (WEC) and DEF approach and schedule related to the IRWST condensate return calculations.

WEC and DEF presented their updated analysis approach regarding the status of the following three condensate return calculations: design basis accident (DBA) extension, the time to safe shutdown, and the safe shutdown duration. The applicant noted that the new approach has major benefits, including reduction in exchanges between calculations and utilization of methodologies that have been reviewed and approved by the NRC staff, and that the new approach does not sacrifice quality or margin.

The applicant stated that both the DBA extension calculation and the time to safe shutdown calculation should be available for NRC review by the end of April 2015 and that the preliminary calculations show results within the acceptance criteria, including a time to safe shutdown of 420°F in less than 36 hours. The safe shutdown duration calculation is still in progress and the applicant noted that the analysis would be submitted for NRC review by the end of June 2015. In order to finalize the analysis process, additional codes are being run to confirm and verify the use of LOFTRAN for the safe shutdown duration analysis. The NRC staff asked if the DBA extension and time to safe shutdown calculations would be affected if confirmatory analyses determine that LOFTRAN is not the appropriate code to use for the safe shutdown duration analysis. WEC and DEF stated that they are confident in the results LOFTRAN produces for the DBA extension and time to safe shutdown calculations, and the safe shutdown duration analysis will have no effect on those calculations.

DEF plans to complete the DBA extension and time to safe shutdown calculations and submit the associated licensing change package by the end of April 2015. The safe shutdown duration analysis is expected to be completed in June 2015 and the submittal is not expected to contain changes to the licensing change package.

At the end of the meeting, there was an opportunity for the public to provide comments and ask questions. No member of the public provided a comment or question.
